

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

AMONG THE ROSICRUCIANS.

I.

THE EXCURSION.

I AM penning these lines in a little village in the Alpine mountains, in Southern Bavaria, and only a short distance from the Austrian frontier. The impressions I received yesterday are still fresh in my mind; the experiences which caused them were as real to me as any other experience caused by the events of every-day life; nevertheless, they were of such an extraordinary character that I cannot persuade myself that they were more than a dream.

Having finished the long and tedious labor of investigating the history of the Rosicrucians, and studying old worm-eaten books, mouldy manuscripts hardly legible from age, passing days and parts of night in convent libraries and antiquary shops, collecting and copying everything that

seemed to be of any value for my object in view, and having at last finished my task, I made up my mind to grant to myself a few holidays, and to spend them among the sublime sceneries of the Tyrolian Alps.

The mountains were not yet free from snow, although the spring had advanced; but I was anxious to escape the turmoil and noise of the city, to breathe once more the pure and exhilarating air of the mountain heights, to see the shining glaciers glistening like vast mirrors in the light of the rising sun, and to share the feeling of Byron, the poet, when he wrote the following verses:—

“ He who ascends to mountain tops shall find
The loftiest peaks most wrapp'd in clouds and snow;
He who surpasses or subdues mankind
Must look down on the hate of those below;
Though high *above* the sun of glory glow,
And far *beneath* the earth and ocean spread,
Round him are icy rocks, and loudly blow
Contending tempests on his naked head,
And thus reward the toils which to these summits led.”

Boarding the train at K., I soon arrived at S. Thence I wandered on foot, highly enjoying the change from the smoky atmosphere of the crowded streets to the fresh air of the country, pregnant

with the odor of the pines and the daisies, the latter of which were appearing in places from which the snow was gone. The road led up through the valley of the river, and, as I advanced, the valley grew more narrow and the sides of the mountain more steep. Here and there were clusters of farmhouses, and some rustic cottages clinging to the projecting rocks of the mountains as if seeking protection against the storms which often blow through these valleys. The sun was sinking down below the western horizon, and gilded the snowy peaks of the mountains and the brazen cross on the top of the spire of the little village church, from which tolled the curfew, or, as it is here called, the *Ave Maria*, when I arrived at O., which was the place selected as a starting-point for my excursions into the mountains.

Finding a hospitable reception in the village inn, I soon retired to rest, and awoke early in the morning, having been aroused from my sleep by the tinkling of little bells hanging around the necks of the goats, which were sent out to their pasturage. I arose and stepped to the window. The shadows of night were fleeing before the

approach of the coming sun ; the dawn had begun, and before me in sublime array stood the grand old peaks of the mountains, reminding me of Edwin Arnold's description of the view to be had from the windows of Prince *Siddârtha's* palace, *Vishramvan*. There the grand mountains stood, —

“ Ranged in white ranks against the blue-untrod
 Infinite, wonderful — whose uplands vast,
 And lifted universe of crest and crag,
 Shoulder and shelf, green slope and icy horn,
 Riven ravine and splintered precipice,
 Led climbing thought higher and higher, until
 It seemed to stand in heaven and speak with gods.”

Soon I was on the way, and wandered farther up through the valley along the river-bed ; but the river was here merely a small stream, rushing and dancing wildly over the rocks, while farther down, where it had grown big, it flowed in tranquil majesty through the plains. The valley through which I wandered seemed to cut through long ranges of mountains, and other valleys opened into this. Some of these valleys were known to me, for I had roamed through them and explored their mysterious recesses, caves, and forests some twenty years ago ; but there was one mysterious

valley which had not yet been explored by me, and which led towards a high, bifurcated mountain peak, whose summit was said to be inaccessible, and upon which the foot of no mortal had ever trod. Towards this valley I seemed to be attracted by some invisible but irresistible power. I left as if, ~~into~~ ^{felt} its unexplored depths, at the foot of this inaccessible mountain, the secret and undefined longings of my heart were to be satisfied; as if there a mystery was to be revealed to me, whose solution could not be found in books.

The sun had not yet risen above the horizon, and the dark woods to the right and left were of a uniform color. As I entered the narrow, mysterious valley, the path rose gradually, leading through a dark forest along the side of a mountain. Slowly and almost imperceptibly it ascended; at first it was near the rushing stream, but as I progressed the roar of the torrent sounded more and more distant; the foaming stream itself seemed to sink farther down. At last the forest became thinner and the dark woods were now far below me; but before me and above the intervening trees rose the naked cliffs of the inaccessible mountain. Still the path led up higher. Soon the distant

noise of a waterfall was heard, and I approached again the bed of the mountain stream, which, however, now seemed to be a mass of rocks, split into pieces by some giant power, lying about in wild confusion, while the white foam of the water danced between the cliffs.

Here and there were little islands of soil covered with green vegetation. They stood like isolated tables in the midst of the wilderness; for the combined action of water and air had decomposed and eaten away a great part of their foundations, and they looked like plates of soil resting upon small pedestals; hard as they are, their final tumble is merely a question of time, for their foundations are slowly crumbling away.

My path led me upwards, sometimes nearing the river-bed, sometimes receding from it, leading sometimes over steep rocks, and again descending to the bottom of ravines formed by the melting snows. Thus I entered deep into the mysterious valley, when the first signs of sunrise appeared upon the cliffs above my head. One of these towering peaks was crowned with a halo of light, while beyond it the full sunlight streamed into the valley below. A mild breeze swept through the

tops of the trees, and the foliage of the birch-trees, with which the pine forest was sprinkled, trembled in the breeze of the morning. No sound could now be heard, except occasionally the note of a titmouse, and more rarely the cry of a hawk who rose in long-drawn, spiral motions high up into the air to begin its work of the day.

Now the ash-gray walls and cliffs began to assume a pale silvery hue, while in the rents and crags of the rock the dark blue shade seemed to resist the influence of the light. Looking backwards, I saw how the valley widened, and, far down, the stream could be seen as it wandered towards the plains. Obtaining more room as it advanced, it spread, and formed ponds and tanks and little lakes among the meadows. On the opposite side of the valley rose the tops of high mountains far into the sky, and between the interstices of the summits, still more summits arose. The foot of the range was covered with a dark vegetation, but the mountain sides exhibited a great variety of colors, from the almost black appearance of the rocks below to the ethereal white of the farthest peaks, whose delicate hues seemed to blend with the pale blue sky. Here and there the surface

was already covered with spots of light from the rising sun, falling through the rents of the rocks and through the branches of trees, foreboding the near arrival of the orb of day. Thus the higher peaks enjoyed the warm light of the sun long before it shone into the valley below; but while it shone in its full brightness upon the mountain tops, the dark shadows in the deep valley became thinner and began to disappear.

At last the solemn moment arrived, and the sun rose in his sublime majesty over the tops of the mountains, becoming visible to all. The shadows fled, and a flood of light penetrated into the valley, lightening up the dark forest of pines and illuminating the caves of the rocks. Shining upon the fields of snow and the glaciers, its light was reflected as in a mirror and produced a blinding effect, but upon the rocky surface it became softened, and made them appear in a thousand various hues.

The road turned around a projecting part of the mountain, and suddenly I stood in full view of the inaccessible mountain. Between the place where I stood and the base of the mountain there was an almost treeless plain, and the soil was almost with-

out any vegetation. Everywhere the ground was covered with stones and pieces of rocks, many of which seemed to have fallen down from the mysterious mountain and to have been broken in the fall. Here and there was a small spot covered with moss or small vegetation, sending fantastically shaped branches of green upwards along the sides of the inaccessible mountain towards the bare gray walls of the summit, where giant sentinels of a forbidding mien stood eternally and immovable, and seemed to defend their strongholds against the aggressive vegetation, crowding the latter back into the valley. Thus the eternal combat which had been raging for untold ages still continued to rage; but the front lines of the contending armies changed from year to year. Everlasting, like the eternal truths, stand the bare gray rocks upon the summits; here and there the vegetation invades their kingdom, like illusions approaching the realm of the real; death is victorious; the green spots are buried each year under the descending rocks; but again life is the victor, for those rocks decay, and a new life appears upon their withered faces.

In the limestone formation of the Alpine

mountains, the rocks decomposed by wind and rain assume often the most fantastic shapes, which often suggest the names which are given to the mountains. Very little power of imagination is required to behold in the shape of the summits of the *Wilden Kaiser Mountain* the figure of the emperor *Barbarossa*, with his long red beard, with crown and sceptre, lying in state, unaffected by the cold of the winter or the summer's heat, waiting to be resurrected; or we may see in the shape of the *Hochvogel* the form of an eagle spreading its wings; in the *Widderhorn*, the shape of the horns of a ram; etc. At the base of the mountains and in the valleys the soil is covered with loose small rocks and piles of sand, in the midst of which the *Colts-foot* plant (*Fussilago Farfara*) spreads its large green leaves, and the blue bell-shaped flowers of the *Monks-hood* (*Aconitum Napellus*) wave their heads. In some secluded spots grows the celebrated *Edelweiss* (*Guaphalium Leontopodium*), resembling in size those which grow on the *Popocatepetl* in Mexico, and on the *Cordilleras* of South America. There may also be found the *Mountain Gentian*, the *Alpine Rose*, the *Mandrake*, *Amica montana*,

mysterious *Hypericon*, and other curious plants full of healing powers and mysterious virtues. Wherever a sufficient quantity of soil has accumulated to enable a tree to grow, a larger kind of vegetation appears; but the little crust of earth is not deep enough to afford a solid footing to large trees. They may grow to a certain height, but some day a storm will arise and sweep down the mountain sides, and then the work of destruction begins. Grand old tree-corpses, whose roots have been torn from the soil, are lying about, their barkless, bleached branches like so many skeleton arms stretched up towards heaven, as if they had been calling for help in the hour of their death, but no help had arrived. Smaller growths of dwarf-trees surround them and cover the ground or feed like parasites upon the substance of the dead.

The spring had advanced; but among these mountains the seasons are interlaced with each other. The red and yellow leaves painted by autumn were seen among the green foliage of the stunted pines. The moss clinging to the steep precipices shows the reddish color obtained in the fall, and in many cliffs and caverns linger the

snow and ice of the past winter; but above the red and green and the pure white snow the gray masses of the summits rise in a succession of pillars and points, with domes and spires and pinnacles, like a city built by the gods; while in the background spreads the gray or blue canopy of heaven. Thin streams of water run down from these heights over the precipices, and as they splash over the projecting rocks they are reduced to vapor before reaching the ground below. The rocks themselves have been hollowed out, forming large caves, and indicating how powerful those little veins of water may become, if swelled by the floods from the melting snows of the summits.

After enjoying for a few minutes the sublimity of this scenery, I continued my way and approached a little stream coming from a waterfall in the distance. I wandered along its border, and the water was so clear that even the smallest pebble could be distinctly seen at the bottom. Sometimes it appeared as motionless as if it were liquid crystal penetrated by the rays of the sun, and again, meeting with obstacles in its way, it foamed in its rocky bed as if in a sudden fit of rage, while in other places it tumbled in little

cascades over pretty pebbles and stones, forming miniature cataracts which exhibited manifold colors.

In these solitudes there is nothing to remind one of the existence of man, except occasionally the sawed-off trunk of a tree, showing the destructive influence of human activity. In some old, rotten, and hollow trunks rain-water has collected, sparkling in the sun like little mirrors, such as may be used by water-nymphs, and around their edges little mushrooms are growing, which our imagination transforms into chairs, tables, and baldachinos for fairies and elves.

Where I now stood, the ground was covered with moss, and occasionally there was to be seen a great, white thistle, whose sharp-pointed leaves sparkled in the sunlight. At a short distance I saw a small grove of pines, looking like islands in the desert, and to that grove I directed my steps. There I resolved to rest and enjoy the beauty of nature. I laid myself down upon the moss in a place which was overshadowed by a mighty pine. The music of the mountain stream was heard at a distance, and opposite to the place where I rested there was to be seen a waterfall, spreading

into a vapor as it fell over the rocks, and in the vapor appeared the colors of the rainbow. The mist fell into a basin formed of rock, and from a rent in this basin, overgrown with moss, the water foamed and rushed, hastening down toward the valley, to become united with the main body of the river.

For a long time I watched the play of the water, and the longer I watched the more did it become alive with forms of the most singular shapes. Supermundane beings of great beauty seemed to dance in the spray, shaking their heads in the sunshine and throwing showers of liquid silver from their streaming curls and waving locks. Their laughter sounded like that of the falls of *Minnehaha*, and from the crevices of the rocks peeped the ugly faces of gnomes and kobolds watching slyly the dance of the fairies. Above the fall the current seemed to hesitate before throwing itself down over the precipice; but below, where it left the basin, it appeared to be irritated by the impediments in its way and impatient to leave its home; while far down in the valley, where it became united to its brother the river, it sounded as if the latter was welcoming it back to its bosom, and as

if both were exulting over their final union in a glad jubilee.

What is the reason that we imagine such things? Why do we endow "dead things" with human consciousness and with sensation? Why are we in our moments of happiness not satisfied to feel that we live in a body, but our consciousness craves to go out of its prison house and mix with the universal life? Is our consciousness merely a product of the organic activity of our physical body, or is it a function of the universal Life, concentrated—so to say—in a focus within the physical body? Is our personal consciousness dependent for its existence on the existence of the physical body, and does it die with the latter; or is there a spiritual consciousness, belonging to a higher, immortal, and invisible self of man, which is temporarily connected with the physical organism, but which may exist independent of the latter? If such is the case, if our physical organism is merely an instrument through which our consciousness acts, then this instrument is not our real self. If this is true, then our real self is there, where our consciousness exists, and may exist independently of the latter. If we mentally float along the curves

of the mountain tops, sinking gradually downwards, rising suddenly upwards, and examining in our imagination the things upon their surface, why do we feel such a sense of exhilaration and joy, as if we were really there, but had to leave our material body behind, because it is too heavy to accompany the spirit to the top of the inaccessible mountain? It is true, a part of our life and consciousness must remain with the physical form, to enable it to continue to live during our absence and to attend to the functions of life; but we have read of somnambules and persons in an ecstatic condition, whose inner spiritual self, with all its powers of consciousness, sensation, and perception, was absent from their apparently dead forms, and visited distant places, going and returning with the velocity of thought, and bringing descriptions of such places which were afterwards verified and found to be true.

Why do we find life in all things, even in those who are considered "dead," if we merely put ourselves in a condition in which we can perceive that they are living? Can there be any dead matter in the universe? Is not even a stone held together by the "cohesion" of its particles, and attracted

to the earth by "gravitation"? But what else is this "cohesion" and "gravitation" but *energy*, and what is "energy" but the *Soul*, an interior principle called *force*, which produces an outward manifestation called *matter*; but which must ultimately be identical with force or substance, or by whatever name we may call a thing of which we have no conception. If this view is correct, then all things possess life, all things possess soul, and there may be soul-beings, whose outward forms are not so gross as ours, and who are therefore invisible to our physical senses, but which may be perceived by our own soul.

In the silence of nature thoughts grow to be waking dreams, and dreams become visions. I imagined how in this solemn solitude I might remain all the rest of my life, perhaps sharing my habitation with a few congenial friends. I imagined how, united by common interests and having identical objects in view, we might be happy and obtain knowledge together. Here, far away from the superficiality and shallowness of common life, a far greater clearness of mental perception, a much deeper concentration of thought, a much higher conception of the truth regarding the mysteries

of nature and man might be obtained. How much would our senses be sharpened for the perception of external and internal things; how much would our knowledge of self increase! What would we care about the tomfooleries of what is called "society"; what would we care to know what is going on in that great insane asylum called "the world"? Here we could live undisturbed within our own selves, unpestered by the necromantic practices of "society," which daily and hourly force us to go out from within our own selves, to appear where we do not desire to be, to act as we do not desire to act, to bow down before the goddess of fashion, whom we despise in our hearts.

Would such a life be useful for us and useful for others? If it is true that the world and we ourselves are made up of ideas, then it is just in such solitudes where the best conditions might be found to grasp and remodel ideas. Thoughts and ideas cannot be merely illusions; they must have a real existence, as real and perhaps more lasting than the objective things of this world; for we know that ideas outlive the death of the forms in which they are represented; we know that ideas,

like other fruits, are born and become mature, and whenever an idea is mature it appears on the mental horizon of the world, and is often grasped at the same time by some receptive minds. A man who is able to grasp and remodel exalted ideas, and give them material expression, may do much more for the benefit of the world by living alone and in solitude, than by living among the world where his work is continually impeded by affairs of minor importance. The ideas which he shapes will not die with his body. They will be thrown upon the great mirror, the Astral Light, and be preserved in the memory of the world, to be grasped and utilized by others.

What is that being we call *man*, after all? What is this living animal organism of flesh, blood, and bones, which lives for a while and then dies, and which the great majority of people esteem so highly, as if it were their own immortal self, and for the comfort of which they often sacrifice their self-respect, their dignity, honor, and virtue? Is it anything else than an animal in whom an intellectual activity of a higher order than in other animals predominates? Can this intellectual activity be the product of the mechanical, chemical, and

physiological activity of dead matter? If not, what is the cause of this activity, and can this cause exist independently of the form? What is a man without any intelligence? If intelligence, as it necessarily must be, is an attribute of the spirit, what is a man without any spirit and without spiritual intelligence?

While I was meditating about this question, a stupid laughter sounded close by my side. I had been so much engaged with my own thoughts that I had not noticed the approach of the stranger; but looking up I saw close by my side one of those half-idiotic human beings whom they call *cretins*, and who are often found in the mountainous countries of Switzerland and Savoy. I was somewhat surprised and startled, and not a little annoyed at the unwelcome interruption, and I asked him rather abruptly, "What do you want?"

A broad grin passed over the face of the dwarf, for such he certainly was, as he answered, "Master says I should guide you to his house." I was somewhat astonished by his reply, but remembering that the dwarf was an idiot, and that no intelligent answer was to be expected from him, I

asked, "Who is your master?" His answer was, "Imperator"; and as he spoke that word a spark of intelligence seemed to shine in his eyes, and the tone of his voice seemed to indicate that this Emperor, whoever he might be, was undoubtedly somebody to whom the cretin rendered implicit obedience. I attempted to ask the dwarf more questions, and to find out who his Emperor was, or where he lived, but all my efforts to obtain information from one who was evidently an idiot were unavailing, and he merely grinned and repeated the words which he had already said before. I therefore at last made up my mind to go with him and see how the adventure would end.

The cretin walked ahead and I followed him; he led me towards the base of the inaccessible mountain. While we were walking on and the idiot often turned back to see whether I was following him, I had a good opportunity to study his dress and his features. He was not over three feet high, and evidently a hunchback. His clothing consisted of a brown gown, to which a hood was attached, which made him appear like a small Capuchin monk of the order of St. Augustine.

An immense big head and a comparatively large body rested upon very thin and small legs, while his feet seemed again to be extraordinarily large. Perhaps on account of his small size and the healthy color of his face, he appeared to be almost a child; but this opinion was contradicted by a gray beard of considerable length which adorned his face. In his hand he carried a staff made of a dead limb of a tree, which he had evidently picked up on his way.

II.

THE THEOSOPHICAL MONASTERY.

I FOLLOWED my weird companion, and soon we regained the path running along the bed of the creek, which flowed tranquilly over a bottom covered with white pebbles, and the shallowness of the water seemed to indicate that we were not far from its source. As we approached the mysterious mountain the stone walls appeared to rise perpendicularly before us, and there was no place visible where any other being but a bird could have ascended; but as we came still nearer, I noticed a rent or break in the side of the wall, opening like a cave or a tunnel. This tunnel we entered, and I saw that it penetrated the giant wall and led into another valley beyond. A few steps brought us to the other end of the tunnel, and an exclamation of joy and surprise escaped my lips as I beheld the beautiful sight which was presented before my eyes.

Before me was a valley surrounded by mountains

of evidently inaccessible height, and in this valley nature and art seemed to have combined to endow it with an almost superterrestrial beauty. Like a vast ocean bay it opened before my sight, closing at the distance with a kind of natural amphitheatre. It was covered with short grass and planted with maple-trees, and on all sides there were forests and groves, small lakes and lovely creeks. Immediately in front of me, but still at a considerable distance, rose the vault of a sublime mountain peak high into the blue ether of space, presenting a cavity with overhanging rocks, looking like the hollow space under a gigantic wave, having been petrified by some magic spell. The sides of the mountain sank in energetically drawn lines towards a lower declivity, and then again rose abruptly to an imposing height.

In the presence of so much sublimity I became dumfounded. My companion seemed to comprehend my feeling; for he, too, stood still and laughed, as if he were pleased to see how full of admiration I was. The stillness which surrounded us would have been complete if it had not been for the noise of a cataract at a distance to the left, falling over a steep preci-

pice and appearing like a string of fluid silver backed by the dark gray rock. The monotonous rush of that fall in contradistinction to the surrounding stillness seemed to me like the rush of the river of time in the realm of eternity; another world than the one to which I had been accustomed seemed to have descended upon me; the air seemed more pure, the light more ethereal, the grass more green than on the other side of the tunnel; here seemed to be the valley of peace, the paradise of happiness and content.

Looking towards the high peak in the distance, I noticed what seemed to be a palace, a fortress, or a monastery of some kind, and as I came nearer, I saw it was a massive building of stone. Its high walls rose above the tops of the surrounding trees, and a dome, as if of a temple, crowned the top of the building. Its exterior appearance indicated the solidity of the walls. It was built in rectangular form, but its architecture was not of a regular style; it presented many projecting windows, turrets, balconies, and verandas.

On the other side of the valley nature was not less sublime and inspiring. Gray giant cliffs, standing out prominently against the steel-blue

background of the sky, rose up to an extraordinary height. Below the highest peaks long strips of white clouds had settled around the mountain, and seemed to separate the top of the latter from its main body. The part below the cloud was partly covered by the shadow and partly illuminated by a pale ghostly light, producing a glamour. There, where the masses of clouds rested against the bulk of the mountain, it seemed to me that I was looking into a world of destruction. It was as if the entrails of the mountain had been torn up, and the uniformity of the desolate jumble of rocks was only interrupted by a few remnants of snow situated in the caverns and crags of the mountain.

As we advanced we came into a broad avenue leading to the building, and I beheld a man of noble and imposing appearance approaching. He was clad in a yellow robe, his head covered with black flowing hair, and he walked with an elastic step. When the cretin saw this man he hurried towards him, prostrated himself before him, and vanished.

I was struck with astonishment by this extraordinary occurrence, but I had no time to reflect, for the stranger approached me and bid me

welcome. He appeared to be a man of about thirty-five years of age, of tall and commanding stature, and his mild and benevolent look seemed to penetrate my whole being and to read my innermost thoughts. "Surely," I thought, "this man is an Adept!"

"Yes," answered the stranger, as if he had been reading my thought, "you have fallen into the hands of the Adepts, of whom you have thought so much and whose acquaintance you often desired to make, and I will introduce you into our temple and make you acquainted with some of our *Brothers of the Golden and Rosy Cross*."

I scanned his face, and now it seemed to me as if this man were not a stranger. There was something so familiar about him as if I had known him for years, and yet I could not find a place for him in my memory. In vain I tortured my brain to find out when or where I had met this man, or at least some other one resembling him in appearance. But again the *Imperator* of this *Rosicrucian Society*, for such he proved to be, answered my unspoken thought by saying: "You are right; we are not strangers, for I have often been in your presence and stood by your side, although you did

not see me. I have directed the flow of ideas which streamed into your brain, while you elaborated them and put them down in writing. Moreover, this place has often been visited by you while your animal body was sleeping, and you have conversed with me and with the brothers; but when your soul returned to its house of flesh and blood, it could not impress the memory of the latter with the recollection of the events through which it had passed, and you could remember none of your transcendental experiences when you awoke. The memory of the animal form retains only the impressions which are made upon it by the avenues of the external senses; the memory of the spirit awakens when we are in the spiritual state."

I told the Emperor that I considered this day the happiest one in my life, and only regretted that I would not be permitted to remain here forever, as I felt that I was not yet worthy to remain in the society of beings so far exalted above my own state.

"We shall not permit you to go away very soon," answered the Master. "You will have ample time to see how we live. But as to your

permanently remaining here, this is at present an impossibility. There are still too many of the lower and animal elements adhering to your constitution and forming a part of yourself. They could not resist long the destructive influence of the pure and spiritual air of this place; and as you have not yet a sufficient amount of truly spiritual elements in your organism to render it firm and strong, you would, by remaining here, soon become weak and waste away like a person in a state of consumption; you would become miserable instead of being happy, and you would die."

"Master," I said, "then I may at least hope to learn, while I am here, the mystery of those great spiritual powers which you possess; by which you are said to be able to transform one thing into another, and transmute base metals into gold?"

"There is nothing mysterious or wonderful about it, my friend," said the Imperator. "Such things are not more wonderful than the ordinary phenomena of nature which we see every day. They are only mysterious to those whose own prejudices and misconceptions hinder them to see the truth. We need not be surprised about them any more than about seeing the moon revolve

around the earth, or watching the growth of a tree. It is all merely the effect of that one primordial power which is called the Will, and which called the world into existence. It may manifest itself in various ways, and on the seven different planes of existence, as mechanical force or as a spiritual power; but it is always the same divine primordial power of Will, acting through the instrumentality of the organism of man, who directs it by his intelligence."

"Then," I said, "the principal requirement would be to learn how to strengthen the Will?"

"Not so," said the Emperor. "The Will is a universal power; it holds together the worlds in space and causes the revolutions of planets; it pervades and penetrates everything, and does not require your strengthening it, for it is already strong enough to accomplish everything possible. You are only an instrument through which this universal power may act and manifest itself, and you may experience the fullest extent of its strength if you do not attempt to oppose it. But if you imagine that you have a *will of your own*, whose mode of action is different from the universal will, you merely pervert an insignificant part of

the latter and oppose it to the great original power. The more you imagine to have such a will of your own, the more you will come into conflict with the original will-power of the universe; and as you are only an insignificant part of the latter, you will be overwhelmed and bring on your own destruction. Your Will can only act powerfully if it remains identical with the will of the universal Spirit. Your Will is strongest if you have no will of your own, but remain in all things obedient to the *Law*."

"Then," I said, "how can we accomplish anything at all? If we can do nothing through the power of our own will, we may as well never attempt to do anything, but wait until Nature performs her work without our aid."

"We can accomplish nothing useful," answered the Master, "by attempting to employ any will of our own; but we may employ our Reason and Intelligence to guide and conduct the already existing universal Will-power in Nature, and thus we may accomplish in a few moments certain things which it would require unconscious nature much longer periods of time to accomplish without our aid. The miller who employs the water of a

river to set his mill in motion does not create water, nor does he attempt to make the river run upwards towards its source; he merely leads the stream into certain channels and uses the already existing current in an intelligent manner to accomplish his purpose. In the same manner acts the Adept. He guides the existing power by his intelligence, and thereby causes it to accomplish certain things in accordance with the law of nature. Man's Intelligence is perhaps the only thing which he may properly call his own; and the highest intelligence to which he may possibly aspire is the perception and understanding of the universal truth."

"Do you see yonder cloud which has settled below the top of the mountain?" continued the Adept. "It will remain there until some current of air blows it away, or until a change of temperature causes it to rise or to fall. If we disperse it by causing the universal forces of nature to act upon the dense masses, we do not act against the law of nature, but guide it by our intelligence."

While the Master spoke these words, he extended his hands toward the mountain, below whose top the clouds had collected, and immediately it seemed as if life had been infused into the dense mass.

It began to whirl and to dance, and finally it rose like a column of smoke up to the top of the mountain, ascending from there high up into the air, giving the mountain the appearance of a volcano. At last it collected again far above the top, in the air, forming a little silvery cloud, through which the sunshine was streaming.

I wondered at this manifestation of life in a cloud; but the Adept, reading my thoughts, said: "Life is universal and everywhere; it is identical with the Will. It is not a product of man, nor can it be monopolized by him. He receives a certain amount of it at the time when he enters the world; Nature supplies him with it and lends it to him; and he must return it to her again when he makes his *exit* from the world. Only he who has succeeded in *fixing* a certain amount of the life principle within his permanent inner self may call that life his own, and retain it after the death of the form."

During this conversation we had slowly approached the building, and I had now an opportunity to examine its exterior in all its details. It was only two stories high, but the rooms seemed to be lofty. It was built in a quadrangular form,

and surrounded by oaks and maple trees, and a large garden or park. Seven steps of white marble led up to the main portal, which was protected by two massive pillars of granite, and over the door appeared in golden letters an inscription, saying: *You, who enter here, leave all evil thoughts behind.*

We entered through the portal into a large vestibule paved with flagstones. In the midst of this room was a statue of *Gautama Buddha* on a pedestal, and the walls were ornamented with golden inscriptions representing some of the most important doctrines of the ancient sages. To the right and left, doors opened into long corridors leading to the various apartments of the Brothers; but the door opposite the entrance led into a beautiful garden, where I beheld many plants and trees such as usually are only to be found in tropical climes. The back of this garden was formed by a building of white marble, surrounded by the dome which I had seen from the distance, after entering through the tunnel, and on the top of the dome was a silver dragon resting on a golden globe.

“This,” said the Emperor, “is the sanctuary of our temple; in this you cannot enter. If you

were to attempt it, the immediate death of your personality would be the consequence; nor would it serve you even if you were able to enter and live, for in that sanctuary everything is dark to all who do not bring with them their own spiritual light, the unextinguishable lamp of divine intelligence to illuminate the darkness."

We walked into one of the corridors. On our left there were numerous doors leading into the cells or apartments of the Brothers, but to the right was a wall, occasionally opening into the tropical garden, and the interstices between these openings were filled out with beautifully painted landscapes. One of these landscapes represented Indian scenery, with the white snow-covered Himalaya Mountains in the background, while the forepart of the picture represented what appeared to be a Chinese pagoda, with a small lake and wooded hills at a distance.

"These pictures," the Master explained, "represent the various monasteries or lamaseries of our order. The one before you is situated near a lake in the interior of *Tibet*, and is occupied by some of the highest Adepts of our order. Each of these pictures shows also a part of the country in

which the monastery is located, so as to give a correct idea of the general character of the locality. But these pictures have an occult quality which will become apparent to you if you concentrate your mind upon some part of the picture."

I did as directed, and concentrated my attention upon the grand portal of the lamasery, and to my astonishment the door opened, and the tall form of an Indian, dressed in shining white robes, with a turban of pale yellow silk upon his head, stepped out of that door. I immediately recognized him to be one of the Tibetan Adepts whom I had seen in my waking dreams. He, too, seemed to recognize me, and smilingly nodded his head, while I bowed reverentially before him. A fine-looking horse was brought forward by some attendant, which he mounted and rode away.

I was speechless from astonishment, but the Emperor smiled and drew me away, quoting a passage of Shakespeare, with a little modification; for he said, "There are many things in Heaven and Earth which are not understood by *your* philosophers."

We passed on to another picture, representing *Egyptian* scenery, with a convent in the fore-

ground and pyramids at a distance; it was of a more gloomy character than the former, probably on account of the desert places by which it seemed to be surrounded. The next picture represented a similar building, situated in a tropical and mountainous country, and the Adept told me it was one located somewhere in the *Cordilleras* of South America. Another one showed a Mohammedan temple, with minarets and the *half-moon* upon their tops. I expressed my surprise to see all the various religious systems in the world represented in these Rosicrucian orders; for I had always believed that the Rosicrucians were an eminently *Christian* order.

The Emperor, again reading my thought, corrected my mistake. "The name 'Rosicrucian Order,' or the 'Order of the Golden and Rosy Cross,'" he said, "is a comparatively modern invention, and was first used by *Johann Valentin Andreae*, who invented the story of the knight *Christian Rosencreuz*, for the same purpose as *Cervantes* invented his *Don Quichote de la Mancha*; namely, for the purpose of ridiculing the would-be Adepts, reformers and gold-makers of his age, when he wrote his celebrated 'Fama Fraternitatis.' Before his

pamphlet appeared, the name Rosicrucian did not mean a person belonging to some certain organized society by that name, but it was a generic name, applied to all Occultists, Adepts, Alchemists, or in fact to anybody who was or pretended to be in possession of some occult knowledge, and who was therefore supposed to be acquainted with the secret signification of the *Rose* and the *Cross*; symbols which have been adopted by the Christian church, which were, however, not invented by her, but which were used by all Occultists thousands of years before Christianity was known. These symbols do not belong exclusively to the Christian church, nor can they be monopolized by her. They are as free as the air for any one who can grasp their meaning, and unfortunately very few of your Christians know that meaning; they only worship the external forms, and know nothing about the living principle which those forms represent."

"Then," I said, "a spiritually enlightened man may become a member of your order, even if he did not believe in any of the so-called *Christian* dogmas?"

To this the Emperor answered: "No man can

become a member of our exalted order whose knowledge is merely based upon dogmas, beliefs, creeds, or opinions which have been taught to him by somebody, or which he has accepted from hearsay or from the reading of books. Such imaginary knowledge is no *real* knowledge; we can know nothing except that which we ourselves know, because we *feel, see, and understand* it. That which is usually called knowledge is merely a matter of memory. We may store our memory with innumerable things, and they may be true or false; but even if they are true, they do not convey real knowledge. Real knowledge cannot be imparted by one man to another; a man can only be guided to the place where he may obtain it; but he must himself grasp the truth, not merely intellectually with his brain, but also intuitively with his heart.

“To obtain real knowledge we must feel the truth of a thing, and understand that it is true, and know the reason why it cannot be otherwise. To believe in the truth of anything without having real knowledge of its truth is merely a superstition; and therefore all your scientific, philosophical, and theological speculations are based upon superstition and not upon real knowl-

edge. The science and knowledge of your modern philosophers and theologians is continually in danger of being overthrown by some new discovery, which will not amalgamate with their artificial systems, because the latter are built upon sensual perceptions and upon logical argumentation. The truth cannot be overthrown; it needs no argumentation, and if it is once perceived by the *spiritual* power of perception and understood by the *spiritual* intelligence of man, it conveys real knowledge to the latter, and cannot be disputed away.

“Our order has, therefore, nothing to do with creeds, or beliefs, or opinions of any kind. We care nothing for them; we only want real knowledge. If we were all sufficiently perfect to recognize all truths by direct perception, we should not need any books or instruments; we should not need to use logic or make any experiments. But if we were in such a state of perfection, we should not be here; we should be in *Nirvana*. As it is, we are still men, although far above the intellectual animal which is usually called man and has not been *regenerated*. We still use our books and have a library, and study the opinions of thinkers;

but we never accept such books or opinions, even if they came from Buddha himself, as our infallible guides, unless they receive the seal from our reason and understanding. We venerate them and make use of them; they serve us, but we do not serve them.”

During this conversation we walked into the library, where thousands of books were standing upon a great number of shelves. I noticed many ancient books of which I had heard, but which I had never seen. There were the *sybilline books*, which are said to have been destroyed by fire; the books of *Hermes Trismegistus*, of which only one is believed to be in existence; and many others of priceless value for the antiquary or the student of hermetic philosophy. While I wondered how these brothers came into possession of such treasures, the Emperor said:—

“Well may you be surprised how we came into possession of books which do not exist; but the secret of this is, that everything, and consequently every book which ever existed, leaves its imperishable impression in the *Astral Light*, and that by certain occult means these impressions may be reproduced from that universal storehouse in the

memory of nature, and be put in a visible, tangible, and material shape. Some of our brothers are to a great extent engaged in making such reproductions, and thus we have without any financial expenses obtained these treasures, which no amount of money could have procured."

I rejoiced to hear these words, because they confirmed my opinion that life in a solitude was not necessarily a life of uselessness, and that ideas are real things, which may be seen and grasped far more easily in a tranquil place than while we are surrounded by the turmoil and the petty cares of life in "society."

In answer to this thought, the Emperor said: "Our monastery has been founded by spiritually enlightened people who had the same thought which I read in your mind. They therefore selected this spot in a secluded valley, whose existence is known to only few, and by making use of certain elementary forces of nature, which are as yet unknown to you, they created an illusion which renders this place safe against all unwelcome intruders. Here those in whom the germ of divinity, being latent or dormant in the heart of every man, has awakened into life and activity,

may find the conditions required for the further development of that germ. Here we live in peace, separated by a barrier from the outer world, which the latter cannot surmount; for even if the existence of our retreat were known, it would be an easy matter for us to create other illusions, which would prevent the intrusion of those who attempted to enter it. We are, however, not excluded from that outer world, although we never enter it with our physical forms. By the exercise of our clairvoyant and clairaudient powers, we may at any moment know what is going on in that world; and if we desire to come into personal contact with it, we leave our physical forms and go out in our *astral bodies*. We visit whomsoever we want, and witness everything without our presence being perceived. We visit the statesman, the minister, the philosopher, and discourser; we infuse thoughts in their minds which are useful, and they do not know from whence those thoughts come. If their prejudices and predilections are very strong, they may reject those thoughts; but if they are reasonable people and know how to discriminate, they will follow the silent advice and profit by it. It is true, that by setting a great amount of will-power

into motion we might handle mankind as if they were merely automatons, and we could cause them to do what we please, while they would still imagine that they were following their own inclination. But to do so would be against the rules of our order and against the great Law, for the latter decides that each man shall be the creator of his own *Karma*. We are permitted to advise the people, but we are not permitted to interfere with their freedom.

“We accept,” the Adept continued, “in our circle every one who has the necessary qualifications to enter it, no matter to what religious belief he may have adhered before he obtained true knowledge; but you will perceive that these qualifications are not in everybody’s possession; they cannot be conferred by favor, and it is a well-known saying, even among the lowest grades of occultists, that the Adept cannot be made, but that he must grow to become one.”

“Master,” I said, “would it not be well for those who desire to develop spiritually and to become Adepts, to imitate your example and to select some secluded places where they could reside undisturbed and give their time to interior

meditation and concentration of thought? I know that there are at present a great many people in various parts of the world, belonging to various nationalities and having various creeds, who have become convinced of the fact that the conditions under which the majority of the men and women of our present civilization exist and live, are not conducive to the quick attainment of a higher spiritual state. They believe that the objects which people usually strive to attain during their comparatively short life upon this globe, such as the gratification of pride and ambition, the hoarding of money, the enjoyment of sexual love, the obtaining of bodily comfort and pleasure, etc., cannot be the true objects of life; but that our present life is only one of the many phases of our eternal existence, and that terrestrial life is only a means to an end, namely, to afford the conditions by which the divine element, germinally contained in every man, may grow and develop, whereby man may attain a higher life like yours, which is not subject to transformation and death, and is therefore of permanent value."

The Adept, who had patiently listened to my outburst of enthusiasm, smiled, and said: "If those

people have advanced so far as to be able to bear a life of seclusion, let them enter it; but to do so it would, above all, be necessary that they should possess some real knowledge. Only those who possess such knowledge will be able to live harmoniously together. As long as men move merely on the plane of beliefs and opinion, each man's opinions and tastes will differ from those of the other to a certain extent, and I am afraid that your proposed harmonial society would prove in the end to be a very unharmonious one, and not at all conducive to that tranquillity necessary for interior concentration.

“I have, however, no doubt that even under such unfavorable auspices considerable advantage might be derived from the establishment of *theosophical monasteries* in secluded places. If you had any colleges, seminaries, schools, or societies where the truth could be taught without all the accompanying rubbish of scientific and theological misconceptions and superstitions, which have accumulated through the ages, great progress would undoubtedly be made. As the present civilization now stands, there are two methods adopted for the education of the people. One is by means of what is called

Science, the other by means of what is called *Religion*. As far as Science is concerned, her deductions and speculations are based upon observation and logic. Her logic may be good enough; but her powers of observation, upon which the fundamentals of her logic rest, are restricted to her very imperfect faculties of sensual perception, and therefore your science is based entirely upon external illusions, and is consequently a superficial and illusive science, knowing nothing about the inner life, which is far more important than external phenomena. Her doctrines regarding the fundamental laws of nature are wrong, and therefore all her deductions are wrong as soon as she leaves the plane of illusions.

“You must not misunderstand me,” he continued, seeing that I did not fully grasp the meaning of his words. “I do not mean to say that your modern science knows nothing about the external appearances of things. She knows what she sees and understands; but not being able to see anything except external and sensual phenomena, she only knows external effects. She knows little or nothing about the invisible causes which produce such visible effects, and as soon

as she attempts to speculate about them, she errs; because causes are not the consequences of their effects, but the consequences of still more interior and fundamental causes, of which modern science knows absolutely nothing, and which, therefore, cannot serve her as a basis from which to draw logical conclusions concerning their ultimate effects. She knows a great deal about the little details of existence which are the ultimate effects of the action of universal Life; but she knows nothing about the Tree of Life, the eternal source from which all these transient phenomena spring.

“As far as your modern theology is concerned, it is based upon an entire misconception of terms which were originally intended to signify certain spiritual powers, of which your priests and laymen can have no correct conception because they have not the spiritual powers necessary to conceive of such things. They dispute with each other about the qualities of certain principles, while neither the one nor the other party knows anything whatever about the object of their disputation. Being narrow-minded, the universal principles and powers which are active

within the great workshop of nature have, in their conceptions, become narrowed down to personal and limited beings; the divine and infinite power which men call God, which exists everywhere and without which nothing can possibly exist, has been reduced in the minds of the ignorant to an extracosmic deity of some kind, who can be persuaded by mortals to change his will, and who needs substitutes and deputies upon this earth to execute his divine laws. Your religion is not the religion of a living God who still lives and who executes his own will; it is the religion of a dead and impotent god who died long ago and left an army of clergymen to rule in his stead. Therefore your modern religions are systems of superstitions from which the truth has been excluded; the infinite God has been deposed from his eternal throne in the hearts of men, and fallible mortal priests have been put in his place. Love has departed, and fear rules mankind; each individual seeks his or her happiness, and forgets the existence of others. Each one wants to be saved at the expense of another; each one wants to obtain a reward which he has not merited; all think that to live is the object

of life, and few realize the fact that man's life can have only one reasonable object, namely, to benefit humanity, and that only he can hope to live eternally who obtains the power to live, not in his perishable self, but in the spiritual element of humanity.

“Your theology should above all be based upon the power to spiritually perceive the truth. But where can you find a clergyman who has any spiritual perceptions, and who dares to trust to his intuition more than to the dogmas prescribed by his church. If he dared to have an opinion of his own and to assert it, he would cease to be a minister of his church and be considered an heretic. In our ‘intellectual’ age everything is left to intellectual investigation alone; little is done to develop the intuitive power of the heart. The consequence is, that our present generation are like people looking at everything by means of a telescope; they see, but they do not *feel* what they see, and the consequence is an entirely false conception of nature and man.

“Man is neither more nor less than a living organism or instrument through which the *Universal One Life* acts. In so far he is merely an

intellectual animal. But man's organization, especially that of his brain, is far superior to that of inferior animals, and therefore man is enabled to become an instrument for the manifestation of the highest principle in the universe, which is called the Principle of Divine Wisdom.

“The instrument, or organism, through which the divine principle acts in man and through man, from within outward, upon the external world, is the organism of the Soul. In this organism the universal and undifferentiated divine Spirit finds the soil to grow in an individualized form; it finds the stimulus for its development and the food from which it may draw its strength. As long as man is unacquainted with the processes going on in this (to him) invisible organism, he will have little power to guide and control these processes; he will resemble a plant, which is dependent for its existence on the elements which are unconsciously brought to it by the winds and the rains, or which may accidentally be found in its surroundings; it has neither the power to prevent nor to promote its own growth. But when man obtains a knowledge of the constitution of his own soul, when he becomes conscious of the processes going on in its

organism and learns to guide and control them, he will be able to promote his own growth. He will become free to select or to reject the psychic influences which come within his sphere, he will become his own master and attain — so to say — psychic locomotion. He will then be as much superior to a man without such knowledge and power as an animal is superior to a plant; for while an animal may go in search of its food and select or reject what it pleases, the plant is chained to its place and depends entirely on the conditions which that one place affords. The ignorant depends on the conditions prepared for him; the knowing one can choose his conditions himself.

“For many centuries a superstitious belief was prevailing among the ignorant as well as among the learned. It was believed that man was a finished being, incapable of any further organic improvement. It was, of course, known that during his lifetime his knowledge could grow, and that as he advanced in age he could learn things which he did not know when he was young; but thought and intellectual activity were looked upon as something incomprehensible, as a force without matter, as an activity without substance, as a

nothing. They did not know where man stored the knowledge which he acquired, nor what became of it when he died. They did not know whether or not after the death of his body he would have another, or even perhaps a still greater, opportunity to acquire knowledge; and if he could learn something after 'death' and without having a body, what was the object of his having any physical body at all? None could tell. The scientists discarded such questions as being unworthy of their consideration, and they preferred annihilation rather than to confess that there was something in the wide expanse of nature which they did not already know. The theories advanced by the theologians were not more satisfactory than those of the scientists, for they believed — or professed to believe — that man was a complete being, having come in a finished state out of the hands of his Creator and, as a punishment for his subsequent bad behavior, having been imprisoned upon this planet. They furthermore were of the opinion that, if a man were leading a pious life, or, after leading a wicked life, obtained the pardon for his sins and the favor of God, he would after his death become a superior being,

be ushered into a paradise, and live in a state of never-ending enjoyment.

“It will be acknowledged now by every independent thinker, that these theories were not very satisfactory to those who desired to know the truth. But there was nothing either to prove or to contradict such assumptions, and, moreover, the multitude did not think; they paid their doctors to do their thinking for them.

“Since the publication of ‘Esoteric Buddhism’ the opinions of the scientists and those of the theologians have been equally shaken in their foundations. The old truth which was known to the ancients, but which had almost been entirely forgotten during our modern age of materialism, that man is not a finished being, incapable of any further organic development, but that his body and his mind are continually subject to transformation and change, and that no transformation can exist where no substance exists, because force cannot exist without substance, has become almost universally known. It was demonstrated to the scientists that their science extended only over a very small portion of that mysterious being called Man; that they only knew his outward appear-

ance, his shell, but nothing of the living power acting within that mask which is called the physical body. It was demonstrated to the presumptuous theologians who believed that man's eternal welfare or damnation depended on their blessings or curses, that justice cannot be separated from God, and that God alone is immortal. It was made logically comprehensible to the intellect that God is the divine spiritual element in man, which alone will continue to live after all the lower and imperfect elements are dissolved, and that therefore a man in whom God did not exist in a state of divinity could not, after the death of his body, jump into a higher state for which he was not fit, and which he was not able to attain while alive.

“The exposition of the essential constitution of Man, known to the Indian sages, described three hundred years ago by *Theophrastus Paracelsus*, and again set forth more fully and clearly than ever before by A. P. Sinnett, is calculated to humble the pride of the scientists and the vanity of the priests. When it is once more known and digested, it will prove to the learned how little they know, and it will draw the line for the

legitimate activity of the clergyman as an instructor in morals. It proves that man is not already a god, as some had imagined themselves to be. It proves that a man may look like an intellectual giant, and still be, spiritually considered, only a dwarf. It demonstrates that the law which governs the growth of organisms on the physical plane is not reversed when it acts within the corresponding organisms on the psychical plane. It shows that out of nothing nothing can grow; but that wherever there is the germ of something, even if that germ is invisible, that something may grow and develop.

“The growth of every germ and of every being, as far as we know it, depends on certain conditions. These conditions may be established either by means of the intellectual activity of the being itself, having the power to surround itself by such, or they may have been established by external causes, over which the being has no control. A plant or an animal cannot grow unless it receives the food and the stimulus which it requires; the intellect cannot expand unless it is fed with ideas and stimulated by reason to assimilate them; the spirit cannot become strong unless it finds in

the lower principles the materials required for the acquisition of strength, and is stimulated by the light of wisdom to absorb that which it requires.

“One element necessary for the development of strength is resistance. If we enter one of the vast pine forests of the Alps, or of the Rocky Mountains in the United States, we find ourselves surrounded by towering trees, whose main trunks have very few branches. Upwards they rise like the masts of a ship, covered with a gray bark, naked, and without foliage. Only near the tops, which reach out of the shadows which they throw upon each other, the branches appear and spread up to the utmost tops, which wave their heads in the sunlight. These trees are all *top-heavy*; their principally or only developed parts are their heads, and all the life which they extract from the ground and the air seems to mount to their heads; while the trunks, although increasing in size as the tree grows, are left undeveloped and bare. Thus they may stand and grow from year to year, and reach a mature age; but some day, sooner or later, some dark clouds collect around the snowy peaks and assume a threatening aspect;

the gleam of lightnings appears among the swelling masses, the sound of thunder is heard, bolts of liquid light dart from the rents in the clouds, and suddenly the storm sweeps down from the summit into the valley. Then the work of devastation begins. These top-heavy trees, having but little strength in their feet, are mowed down by the wind like so many stems of straw in a field of wheat; there they lie rank after rank, having tumbled over each other by the fall, and their corpses encumber the mountain sides. But at the edge of the timber, and outside of the main body of the forest, looking like outposts or sentinels near the lines of a battle, there are still here and there some solitary pines to whom the storm could do no harm. They have, on account of their isolated positions, been exposed to winds all their lives; they have become used to it and grown strong. They have not been protected and sheltered by their neighbors. They are not top-heavy, for their great strong branches grow out from the trunk a few feet above the soil, continuing up to the tops, and their roots have grown through the crevices of the rocks, holding on to them with an iron grasp. They have met with

resistance since the time of their youth, and by resisting have gained their strength.

“Thus intellectual man, growing up protected by fashion and friends in a school, college, university, or perhaps within the walls of the convent, finds himself isolated from contrary influences and meets with but little resistance. Crowded together with those who think like him, he lives and thinks like the others. Over their heads waves the banner of some accepted authority, and upon that banner are inscribed certain dogmas in which they believe without ever daring to doubt their veracity. There they grow, throwing upon each other the shadow of their ignorance, and each prevents the others from seeing the sunlight of truth. There they cram their brains with authorized opinions, learning a great many of the details of our illusory life which they mistake for the real existence; they become top-heavy, for all the energy which they receive from the universal fountain of life goes to supply the brain; the heart is left without supply; the strength of character, of which the heart is the seat, suffers; the intellect is overfed and the spirit is starved. Thus they may grow up and

become proud of their knowledge; but perhaps some day new and strange ideas appear on the mental horizon, a wind begins to blow, and down tumbles the banner upon which their dogmas have been inscribed, and their pride tumbles down with it.

“But not only on the physical and the intellectual plane; in the realm of the emotions, too, the same law prevails. He who desires to develop strength must not be afraid of resistance; he must obtain strength in his feet. He must be prepared to meet the wind of contrary opinions, and not be overthrown when the storms of passion arise. He should force himself to remain in contact with that which is not according to his taste, and even to harmonize with that which appears inimical, for it is really his friend, because it may supply him with strength. He should learn to bear calumny and animosity, envy and opposition; he should learn to endure suffering, and to estimate life at its true value. The contrary influences to which he may have been exposed will cause a tempest to rage through his heart; but when he has gained the power to command the tempest to cease and to

say to the excited waves of his emotions, Be still! then will the first gleam of the rising sun appear in his heart, and before its warm glow the cold moonlight thrown out by the calculating and reflecting brain will grow pale; a new and still larger world than the external one will appear before his interior vision, in which he will be contented to live, and where he will find an inexhaustible source of happiness, unknown to those who live a life of the senses. Henceforth he will require no longer to speculate reflectively about the truth, for he will see it clear in his own heart. Henceforth he will not be required to be exposed to storms, but may seek shelter in a tranquil place; not because he is afraid of the storms, which can do him no harm, but because he wants to employ his energies for the full development of the newly awakened spiritual germ, instead of wasting them uselessly on the outward plane.

“Thus it appears that only after having reached a certain state of maturity, life in a solitude, isolated from contrary influences, becomes desirable and useful, and that those who retire from the world as long as they need the

world are attempting to ascend to the kingdom of heaven by beginning at the top of the ladder. Let him who needs the world remain in the world. The greater the temptations are by which he is surrounded, the greater will be his strength if he successfully resists. Only he who can within his own mental sphere create the conditions which his spirit requires, is independent of all external conditions and free. He who cannot evolve a world within his own soul needs the external world to evolve his soul.

“*Unspiritual* men, therefore, who retire from the world because they are afraid of the world, cannot be considered to be heroes who have renounced the world; they deserve rather to be regarded as cowards who have deserted their ranks at the beginning of the battle with life. Such people sometimes retire into convents for the purpose of having a comfortable life, and in addition to that a ticket to heaven. They imagine to do a service to God by leading a harmless and useless life; for which imaginary service they expect to obtain a reward at the end of life. But the reward which they will receive will also exist merely in their imagination. As the sensualist wastes his

time in the prosecution of useless pleasures, so the bigot wastes his time in useless ceremonies and prayers. The actions of the former are instigated by a desire for sensual pleasure in this life, those of the latter by the hope for pleasure in another life ; both are acting for the purpose of gratifying their own personal selves. I am unable to see any essential difference between the motives and morals of the two.

“ But with *spiritually developed* man the case is entirely different. The divine principle in man exists independent of the conditions of relative space and time ; it is eternal and self-existent. It cannot be angered by opposition, nor irritated by contradiction, nor be thrown into confusion by sophistry. If it has once become conscious of its own power in man, it will not require the stimulus required by the physical organism and afforded by the impressions which come through the avenues of the senses from the outer world ; for it is itself that stimulus which creates worlds within its own substance. It is the Lord over all the animal elemental forces in the soul of man, and their turmoil can neither educate it nor degrade it, for it is Divinity itself in her pure state, being eternal, unchangeable, and free.

“He in whom this divine principle has once awakened, he who has once practically experienced the inner life, who has visited the kingdom of heaven within his own soul, he who stands firm upon his feet, will no more need the educating influences of the contending storms of the outer world, to gain strength by resistance; nor will he experience any desire to return to the pleasures and tomfooleries of the world. He renounced nothing when he retired into the solitude; for it cannot be looked upon as an act of renunciation if we throw away a thing which is a burden to us. He cannot be called an *ascetic*; for he does not undergo any discipline or process of hardening; it is no act of self-denial to refuse things which we do not want. The true ascetic is he who lives in the world, surrounded by its temptations; he in whose soul the animal elements are still active, craving for the gratification of their desires and possessing the means for their gratification, but who by the superior power of his will conquers his animal self. Having attained that state, he may retire from the world and employ his energies for the further expansion and the employment of the spiritual power which he possesses. He will be

perfectly happy, because that which he desires he can create within his own interior world. He expects no future reward in heaven; for what could heaven offer to him except happiness which he already possesses. He desires no other good but to create good for the world.

“If you could establish theosophical monasteries, where intellectual and spiritual development would go hand in hand, where a new science could be taught, based upon a true knowledge of the fundamental laws of the universe, and where at the same time man would be taught how to obtain a mastery over himself, you would confer the greatest possible benefit upon the world. Such a convent would, however, afford immense advantages for the advancement of intellectual research. The establishment of a number of such places of learning would dot the mental horizon of the world with stars of the first magnitude, from which rays of intellectual light would stream and penetrate the world. Standing upon a far higher plane than the material scientists of our times, a new and far greater field than that offered to the latter would be laid open for investigation and research. Knowing all the different opinions of

the highest accepted authorities, and not being bound by an orthodox scientific creed, having at their service all the results of the investigations of the learned, but not being bound to their systems by a belief in their infallibility, they would be at liberty to think freely. Their convents would become centres of intelligence, illuminating the world; and if their power of self-control would grow in equal proportion with the development of their intellect, they would soon be able to enter adeptship."

The Adept had spoken these words with unusual warmth, as if he intended to appeal to my sympathy and to induce me to use my efforts to establish such convents; there was a look of pity in his eyes, as if he exceedingly regretted the state of poor ignorant humanity, with whose Karma he was not permitted to interfere forcibly, according to the established rules of his order. I, too, regretted my own inability to establish such monasteries, and for once I wished that I was rich, so as to be able to make at least an attempt with one such establishment. But immediately the Emperor saw my thought in my mind, and said: —

"You mistake; it is not the want of money

which prevents us to execute this idea ; it is the impossibility to find the proper kind of people to inhabit the convent after it is established. Indeed, we would be poor Alchemists if we could not produce gold in any desirable quantity, if some real benefit for humanity could be effected thereby, and of this I shall convince you, if you desire it. But gold is a curse to mankind, and we do not wish to increase the curse from which humanity suffers. Distribute gold among men, and you will only create a craving for more ; give them gold, and you will transform them into devils. No ; it is not gold that we need ; it is men who thirst after wisdom. There are thousands who desire knowledge, but few who desire wisdom. Intellectual development, sagacity, craftiness, cunning, are to-day mistaken for spiritual development, but this conception is wrong ; animal cunning is not intelligence, craftiness is not wisdom, and your most learned men are the last ones who can bear the truth. Even many of your would-be Occultists and Rosicrucians have taken up their investigations merely for the purpose of gratifying their idle curiosity, while others desire to pry into the secrets of nature to obtain knowledge which they

desire to employ for the attainment of selfish ends. Give us men or women who desire nothing else but the truth, and we will take care of their needs. How much money will it require to lodge a person who cares nothing for comfort? What will it take to furnish the kitchen for those who have no desire for dainties? What libraries will be required for those who can read in the book of nature? What external pictures will please those who wish to avoid a life of the senses and to retire within their own selves? What terrestrial scenery shall be selected for those who live within the paradise of their souls? What company will please those who converse with their own higher self? How can we amuse those who live in the presence of God?"

Here the Adept paused for a moment, and then continued, saying: "Verily the theosophical monastery of which I dream is even superior to ours. It is located far away from this earth, and yet it can be reached without trouble and without expense. Its monks and nuns have risen above the sphere of self. They have a temple of infinite dimensions, pervaded by the spirit of saucity, being the common possession of all. There the dif-

ferentiation of the Universal Soul ceases, and Unification takes place. It is a convent where there exists no difference of sex, of taste, opinion, and desire; where vice cannot enter; where none are born, or marry, or die, but where they live like the angels; each one constituting the centre of a power for good; each one immersed in an infinite ocean of light; each one able to see all he desires to see, to know all he wants to know, growing in strength and expanding in size, until he embraces the All and is one with it."

For a moment it seemed as if the soul of the Adept had gone and visited that blissful state of *Nirvana*, a state of which we mortals cannot conceive; but soon the light returned into his eyes, and he smilingly excused himself, saying that he had permitted himself to be carried away by the sublimity of this idea. I ventured to say that probably millions of ages would pass away before mankind would arrive at that state.

"Alas!" he answered, "the conditions which our present state of civilization imposes upon its followers are now such as to force the vast majority of the latter to employ nearly all their time and energy in an outward direction, instead of

employing them for their inward growth. Each man has a certain amount of energy which he may call his own. If he wastes all that energy on the outward plane, either for the attainment of sensual gratification or in intellectual pursuits, he will have nothing left to develop the divine germ in his heart. If he continually concentrates his mind outwardly, there will be no inward concentration of thought, which is absolutely necessary for the attainment of self-knowledge. The laboring classes, the people of commerce, the scientists, doctors, lawyers, and clergymen are all actively engaged in outward affairs, and find little time for the inward concentration of their powers. The majority are continually busy to run after shadows and illusions, which are at best only useful as long as they last, but whose usefulness ceases when the heart ceases to beat. Their time and energy are taken up in procuring what they call the 'necessities of life,' and they excuse themselves by saying that it is their misfortune to be so situated as to be forced to procure them. Nature, however, cares nothing for our excuses; the law of cause and effect is blind and inaccessible to argumentation. A man climbing over a mountain top and falling

over a precipice, is as much in danger of breaking his neck as if he had jumped down voluntarily; a man who is not able to progress will be left as far behind as one who does not desire to progress. But nature is not so cruel as she appears to be to the superficial observer. That which man requires for the purpose of living is very little indeed, and can usually easily be obtained; for Nature has amply provided for all of her children, and if they cannot all obtain their proper share, then there must be something seriously wrong, either with them individually or with the social organization as a whole. There is undoubtedly a great deal wrong in our social organization, and our philosophers and politicians are continually trying to remedy it. They will succeed in their task when they succeed in making the laws of the human world harmonize with the laws of nature, and not before. That event may take place in the far-distant future. We have not the time to wait for it. Let each one attempt to restore harmony in his own individual organism and live according to natural laws, and the harmony of the social organism as a whole will be restored.

“The great bulk of those things which are said to

be the necessities of life are only artificially created necessities, and millions of people lived and attained old age long before many of the things which our modern civilization considers as being absolutely necessary had been discovered or invented. The term 'necessity' has a relative meaning; and to a king a dozen of palaces, to a nobleman a carriage with four, may appear as much a necessity as to a beggar a bottle of whiskey, or to a fashionable man a new swallow-tail coat. To get rid at once of all such fancied necessities and the trouble which is imposed upon us to attain them, the shortest and surest way is to rise above such necessities and to consider them not to be necessary at all. Then a great amount of our energy would become free, and might be employed for the acquisition of that which is really necessary, because it is eternal and permanent, while that which serves merely temporal purposes ends in time.

“There are thousands of people engaged in prying into the details of the constitution of external objects and to learn the chemical and physiological processes going on therein, without manifesting the least curiosity to know their own

constitution and the processes going on within their own organization; although it would seem that a knowledge of the latter is far more important than an investigation of the former. Science says that she wants to know the laws of nature in all their minute ramifications, and yet she pays no attention whatever to the universal and fundamental law from which all these ramifications spring; and thus she resembles an insect crawling over a fallen leaf and imagining thereby to learn the qualities of the tree. It is surely the prerogative of intellectual man to investigate intellectually all the departments of nature; but the investigation of external things is only of secondary importance to the attainment of knowledge of our own interior powers. All primary powers act from within; effects are secondary to causes. He who considers the knowledge of external things to be more important than the knowledge of self, possesses very little wisdom indeed."

"These doctrines," I said, "will never be accepted by our schoolmen; they look upon the very term 'Theosophy' with contempt; they believe that a knowledge of external things is the only knowledge attainable, and the only one worth

having, and this illusive knowledge they call *exact science*."

"I pity them for their imperfections," answered the Adept; "nevertheless their views are justifiable from their own standpoint. If they object to the term 'Theosophy,' it is because they do not know what the term means; and as it has often been misapplied, they have formed a misconception about it. We can know nothing except what we know *theosophically*; because theosophical knowledge is the result of feeling, seeing, and understanding a thing. Their sense of seeing and feeling does not penetrate below the external surface of things, and they therefore know theosophically merely the outward appearance, and the internal causes are left to speculations which are often erroneous. The higher sense, by which the Adept is able to penetrate with his consciousness into the interior of things and identify himself for the time being with the object of his observation, share its sensations, to feel as if he were that object, to see the workings of the interior causes, and consequently be able to understand them, is unknown to the scientists of our present civilization."

As the Adept finished this sentence, a sound as if produced by the tinkling of small silver bells was heard in the air above our heads. I looked up, but nothing was to be seen from which that sound could have proceeded.

“This is the signal,” said the Adept, “that the members of our order are assembled in the *Refectory*. Let us go to join their company. Some refreshment will undoubtedly be welcome to you.”

III.

THE REFECTORY.

WE stepped out into the corridor and entered the garden. The palm-trees and exotic plants, by which we were surrounded, formed a strong contrast to the weird and desolate scenery, with its fields of ice and scrub-pines, which I had seen before entering this enchanted valley. High bushes of *Fuchsias* changed with *Rose-bushes*, and all were covered with the most beautiful flowers; the air was perfumed from the odor of many varieties of *Hyacinths*, *Heliotropes*, and other plants whose names I do not remember. Nevertheless the place was not a hot-house, for there was no other roof over it than the clear blue sky. I wondered whether perhaps the garden was heated from below the surface, and the thought came into my mind that so much luxury seemed not to agree with the views, expressed by the Adept, that those who live within the paradise of their own souls do not care for external sensual gratifi-

cation. But the Emperor seemed to know my thought even before it had taken a definite form in my mind, and said : —

“ We have created these illusions to make your visit to this place an agreeable one in every respect. All these trees and plants which you see, require no gardeners, and are inexpensive ; they cost us nothing but an effort of our imagination.”

I went up to one of the rose-bushes and broke one of the roses. It was a real rose, as real as I had ever seen one before ; its odor was sweet, and it had just unfolded its leaves in the rays of the mid-day sun.

“ Surely,” I said, “ this rose which I hold in my hand cannot be an illusion, or an effect of my imagination ? ”

“ No,” answered the Adept, “ it is not produced by your own imagination, but it is a product of the imagination of nature, whose processes can be guided by the spiritual will of the Adept. The whole world, with its solid planets, its mountains of granite, its oceans and rivers, the whole earth with all its multifarious forms, is nothing else but a world of the imagination of the *Universal Mind*, which is the *creator* of forms. Forms are nothing

real, they are merely illusions or shapes of substance; a form without substance is unthinkable and cannot exist. But the only substance of which we know is the universal primordial element of matter, constituting the substance of Universal Mind, the *A'kâsa*. This element of matter is invisibly present everywhere; but only when it assumes a certain state of density, sufficient to resist the penetrating influence of the terrestrial light, does it come within the reach of your sensual perception, and assume for you an objective shape. The universal power of will penetrates all things. Guided by the spiritual intelligence of the Adept, whose consciousness pervades all his surroundings, it creates in the Universal Mind those shapes which the Adept imagines; for the sphere of the Universal Mind, where he lives, is his own mind, and there is no difference between the latter and the former, as far as the sphere of the latter extends. By an occult process, which cannot be at present explained to you, but which exists principally in an effort of will, the shapes thus created in the mind-substance of the Adept are rendered dense, and thereby become objective and real to you."

“I acknowledge,” I said, “that this is still incomprehensible to me. Can an image formed in your head come out of your head and assume a material form?”

The Adept seemed to be amused at my ignorance, and smilingly answered: “Do you believe that the sphere of mind in which man lives exists only within the circumference of his skull? I should be sorry for such a man; for he would not be able to see or perceive anything whatever, except the processes going on in that part of his mind contained within his skull. The whole world would be to him nothing but impenetrable and incomprehensible darkness. He would not be able to see the sun or any external object; for man can perceive nothing except that which exists within his own mind. But fortunately for man, the sphere of the mind of each individual man reaches as far as the stars. It reaches as far as his power of perception reaches. His mind comes in contact with all things, however distant they may be from his physical body. Thus his mind—not his brain—receives the impressions; but these impressions come to his consciousness within his physical brain, which is merely the centre in which the messages of the mind are received.”

After giving this explanation, the Adept, evidently still seeing some doubts in my mind, directed me to look at a *Magnolia-tree* which stood at a short distance. It was a tree of perhaps sixty feet in height, and covered with great, white, beautiful flowers. While I looked, the tree began to appear less and less dense. The green foliage faded into gray, so that the white blossoms could hardly be distinguished from the leaves; it became more and more shadowy and transparent; it seemed to be merely the ghost of a tree, and finally it disappeared entirely from view.

“Thus,” continued the Adept, “you see that tree stood in the sphere of my mind as it stood in yours. We are all living within the sphere of each other’s mind, and he in whom the power of spiritual perception has been developed may at all times see the images created in the mind of another. The Adept creates his own images; the ordinary mortal lives in the products of the imagination of others, either in those of the imagination of nature, or in those which have been created by other minds. We live in the paradise of our own soul, and the objects which you behold exist in the realm of our soul; but the

spheres of our souls are not narrow. They have expanded far beyond the limits of the visible bodies, and will continue to expand until they become one with the Universal Soul and as large as the latter.

“The power of the imagination is yet too little known to mankind, else they would better beware of what they think. If a man thinks a good or an evil thought, that thought calls into existence a corresponding form or power within the sphere of his mind, which may assume density and become living, and which may continue to live long after the physical body of the man who created it has died. It will accompany his soul after death, because the creations are attracted to their creator.”

“Does, then,” I asked, “every evil thought or the imagination of something evil create that evil and cause it to exist as a living entity?”

“Not so,” answered the Emperor. “Every thought calls into existence the form or power of which we think; but these things have no life until life is infused into them by the Will. If they do not receive life from the Will, they are like shadows and fade soon away. If this

were not the case, men could never read of a crime without mentally committing it, and thereby creating most vicious Elementals. You may imagine evil deeds of all kinds, but unless you have a desire to perform them, the creations of your imagination obtain no life. But if you desire to perform them, if your will is so evil that you would be willing to perform them if you had the external means to do so, then it may perhaps be as bad for you as if you had actually committed them, and you create thereby a living although invisible power of evil. It is the Will which endows the creations of imagination with life, because *Will* and *Life* are fundamentally identical."

Seeing a doubt arise in my mind, he continued: "If I speak of the Will as a life-giving power, I am speaking of the spiritual will power which resides in the heart. A will power merely exercised by the brain is like the cold light of the moon, which has no power to warm the forms upon which it falls. The life-giving will power comes from the heart, and acts like the rays of the sun which call life into action in minerals, plants, and animals. It is that which man

desires with his heart, not that which he merely imagines with his brain, which has real power. Fortunately for mankind in general, this spiritual will power which calls the creations of the imagination into objective visible existence is in the possession of very few, else the world would be filled with living materialized monsters, which would devour mankind; for there are in our present state of civilization more people who harbor evil desires than such as desire the good. But their will is not spiritual enough to be powerful; it comes more from the brain than from the heart; it is usually only strong enough to harm him who created the evil thought, and to leave others unaffected. Thus you see how important it is that men should not come into possession of spiritual powers until they become virtuous and good. These are mysteries which in former times were kept very secret, and which ought not to be revealed to the vulgar. If you make use of them, be careful to discriminate between the good and the evil disposed."

We entered through a Gothic portal into a hall. The light fell through four high windows into the room, which was of an octagonal form. In the

midst of this room stood a round table surrounded by chairs, and the corners formed by the sides of the octagon were provided with furniture of various kinds. There were quite a number of the Brothers assembled, some of whom I recognized from having seen their pictures in historical representations; but what astonished me above all was that there were two ladies present, — one appearing very tall and dignified, the other one of smaller stature and of a more delicate, but not less noble, appearance, and exceedingly beautiful. To find *ladies* in the monastery of the Brothers of the Golden and Rosy Cross was a fact which surprised and staggered me, and my confusion was evidently observed by all present; but after having been introduced to all the persons present, — or, to express it more correctly, after having had them all introduced to me, for they all seemed to know me and not to need my introduction, — the tall lady took my hand and led me to the table, while she smilingly spoke the following words: —

“Why should you be so surprised, my friend, to see Adepts inhabiting female forms in company of those whose forms appear to be of a

male character? What has intelligence to do with the sex of the body? Where the sexual instincts end, there ends the influence of sex. Come, now, and take this chair by my side, and have some of this delicious fruit."

The table was covered with a variety of excellent fruits, some of which I had never seen before, and which do not grow in this country. The illustrious company took their seats, and a conversation ensued in which all took part. I only too deeply felt my own inferiority while in this place, but every one seemed to exert his powers to reassure me and to make me imagine that I was their equal. The Brothers and Sisters hardly tasted the food, but they seemed to be pleased to see me enjoy it, and in fact my morning walk and the pure air of the mountain had given me a very good appetite. The noble lady next to whom I was seated soon succeeded in making my embarrassment vanish, answered my questions in regard to the causes of certain occult phenomena, and made a few practical experiments to illustrate her doctrines. The following may serve as an example of the powers she possessed to create illusions :—

We came to speak of the intrepidity and undaunted courage which he must possess who desires to enter the realm of occult research: "For" she said, "the whole elemental world, with all its monstrosities and animal elements, is opposed to man's spiritual progress. The animals (Elementals) living in the animal principle of man's constitution, live on his life and on the substance of his animal elements. If the divine spirit awakens within the heart of man and sends his light into those animal elements, the substance on which these parasites live becomes destroyed, and they begin to rage like other famished beasts. They fight for their lives and for their food, and they are therefore the greatest impediments and opponents to the spiritual progress of man. They live in the soul of man, and are, under normal conditions, invisible to the external senses, although under certain conditions they may even become visible and objective. They live in families, and reproduce their species like our terrestrial animals; they fight with each other and eat each other up. If a man's selfish desires, such as are of a minor type, are all swallowed up by some great master-passion, it merely shows that a *monster elemental* has

grown in his soul and devoured all the minor elementals."

I answered that it was impossible for me to believe that man was such a living and walking menagerie, and said I wished I could see one of these elementals, so as to realize what it is.

"Would you not be afraid," she asked, "if such a vicious thing would appear before you?"

I began to boast of my bravery, and said that I was never afraid of anything which I could see with my eyes and reach with my hands; that fear was the outcome of ignorance, and that knowledge dispelled all fear.

"You are right," she answered; "but will you be so kind as to hand me that basket with pears."

I stretched forth my hand after the basket with pears, which stood in the midst of the table, and as I was about to grasp it, a horrible rattlesnake rose up between the fruit; rearing its head and making a noise with its rattles as if in great anger. Horror-struck, I withdrew my hand, barely escaping its venomous bite; but while I stared at it, the serpent coiled itself again up among the pears, its glistening scales disappeared in the basket, and the snake was gone.

“If you had dared to grasp the snake,” said one of the Brothers, who had witnessed the scene, “you would have found it to be merely an illusion.”

“The Will,” remarked the Emperor, “is not merely a life-giving power; it is also a destroyer. It causes the atoms of primordial matter to collect around a centre; it holds them together, or it may disperse them again into space. It is *Brahma*, *Vishnu*, and *Siva* in one; the creator, maintainer, and destroyer of form.”

“These Elementals,” said the beautiful lady, “master us if we do not master them. If we attack them without fear, they can do us no harm; our will is destructive to them.”

The conversation during our breakfast turned about Occultism and kindred subjects. “Occultism and Alchemy,” said one of the Brothers, “are at once the most difficult and the easiest things to grasp. They are indeed easy to comprehend, if we only remain natural and look at the mysteries of nature by the light of reason, with which each human being, except an idiot, has been endowed by nature at the time of his birth. But if in the place of reason, the artificial candle-light of false logic, sophistry, and speculation is

placed by an irrational education, man steps out of his natural state and becomes unnatural. The images of the eternal truths, which were mirrored in his mind while he was a child and innocent, and not sufficiently intellectually developed to understand them, become by the time that his intellect is developed, so distorted and perverted by the prejudices and misconceptions by which his mind is fed, that their original forms are no more recognizable, and instead of seeing the truth, man only sees the hallucinations which his fancy has created."

"Do you mean to say," I asked, "that man can possibly know anything about the nature of things, except that which is taught to him by others?"

"Does the child," asked the Adept, in answer to my question, "need an instructor to explain to it the use of its mother's breasts? Do the cattle require books on botany to know which herbs are poisonous and which are wholesome? Those artificial systems which have been created by man, and which are therefore unnatural, cannot be read in the book of nature; to know the name of a thing which has been invented for it by man, the child needs man's instructions; but the essential

attributes of a thing are independent of the name given to it. Shakespeare says that a rose would have an agreeable odor, even if it were called by some other name. At the present state of education, natural philosophers know all about the artificial names and classifications of things, but very little about their interior qualities. What does a modern botanist know about the *signatures* of plants, by which the Occultist recognizes the medicinal and occult properties of plants as soon as he sees them? The animals have remained natural, while man became unnatural. The sheep does not need to be instructed by a zoölogist to seek to escape if a tiger approaches; it knows by his signature, and without argumentation, that he is its enemy. Is it not much more important for the sheep to know the ferocious character of the tiger, than to be informed that the latter belongs to *genus Felis*?² If by some miracle a sheep should become intellectual, it might learn so much about the external form, anatomy, physiology, and genealogy of the tiger, that it would lose sight of its internal character and be devoured by it. Absurd as this example may appear, it is nevertheless a true representation of what is done

in your schools every day. There the rising generation receive what they call a scientific education. They are taught all about the external form of man, and how that form may be comfortably fed, lodged, and housed, but the sight of the real man who occupies that form is entirely lost, his needs are neglected, he is starved, ill-treated, and tortured, and some of your 'great lights of science' have become so short-sighted that they even deny that he exists."

"But," I objected, "is it not a great prerogative which intellectual man enjoys over the animal creation, that he possesses an intellect by which he is able to understand the attributes of things which the animal merely instinctively feels?"

"True," said the Brother; "but man should use his intellect in accordance with reason, and not oppose his intellect to the latter. Instinct in animals is the activity in the animal organism of the same principle whose action in human beings is called reason. It is the faculty of the soul to *feel* the truth; while the function of the intellect is to understand that which is instinctively or intuitively felt by the soul, or perceived by the exterior senses. If the intellect were to act only in

harmony with reason, all intellectual human beings would not only be intellectual, but would also be *wise*; but we know from our daily experience that intellectuality is not necessarily accompanied by wisdom, that often those who are most cunning are also most vicious, and the most learned often the most unreasonable."

"The first and most important step," continued the Brother, "which man must make, if he desires to obtain spiritual power, is to become natural. Only when he has thrown off all his unnatural qualities can he hope to become spiritually strong. If he were to become spiritual before he becomes natural, he would be an unnatural spiritual monster. Such monsters have existed and still exist. They are the spiritual powers of evil acting through human forms; they are the Adepts of *Black Magic*, sorcerers and villains of various grades."

"Then," I said, "I presume that great criminals are to a certain extent black magicians."

"Not necessarily so," answered the Brother. "The majority of evil-doers do evil, not for the love of evil, but for the purpose of attaining some selfish purpose. The villains who are on the road to black magic act evil because they love it, in the

same sense as those who are on the road to true adeptship perform good merely because they love good. But whether man performs good or evil acts, a constant or frequent repetition of such acts causes him finally to perform them instinctively, and thus his own nature becomes gradually either identified with good or with evil. He who merely tortures a fly for the sake of torturing it, and because he is pleased to do so, is farther progressed on the road to villany and absolute evil with consequent destruction, than he who murders a man because he imagines it to be necessary for his own protection that he should murder him."

Here the conversation began to turn about *White Magic* and the wonderful powers of certain Tibetan Adepts. The Emperor, who had recently visited them, gave a detailed account of his visit. But, strange as it may appear, while all the details of the other part of our conversation remained deeply engraven in my memory, the account given by the Emperor about that visit is entirely effaced from my mind, and I cannot remember anything whatever about it. It is as if its recollection had been purposely eradicated from my mind.

After our breakfast was over, the Emperor

recommended me to the care of the two Lady-Adepts, and told me that he would soon rejoin us to show me his alchemical laboratory. I then accompanied my two protectors into the beautiful garden.

We passed through an alley formed by oleander bushes in full bloom, and arrived at a little round pavilion standing upon a little eminence, which afforded a beautiful view of the country and the tall mountain tops in the distance. The roof of the pavilion was supported by marble columns and surrounded by ivy, which grew around the pillars and nearly covered the roof, hanging down at intervals in the open spaces. We seated ourselves, and after a short pause, my friend, whom I will call *Leila*, said: "I owe you an explanation in regard to the remarks which I made when I saw your astonishment to see the female sex represented among the Brothers of the Golden and Rosy Cross. Your intuition told you right. It indeed not very often happens that an individual attains adeptship while inhabiting a female organism, because such an organism is not as well adapted as a male one to develop energy and strength, and it is, therefore, frequently the case that those women who

have far advanced on the road to adeptship must reincarnate in a male organism, before they can achieve the final result. Nevertheless, exceptions are found. You know that the organism of a man is not fundamentally different from that of a woman, and in each human being are male and female elements combined. In women usually the female elements preponderate, and in men the male ones are usually most active, although we meet with women of a masculine character, and with men who are of a womanish nature. In a perfect human being the male and female elements are nearly equally strong, with a slight preponderance of the male element, which represents the productive power in nature, while the female element represents the formative principle. This occult law, which to explain at present would lead us deep into the mysteries of nature, will become comprehensible to you if you will study the laws of harmony. You will then find that the *Mall*-accord is the harmonious counterpart of the *Dur*-accord, but that the greatest beauty finds its expression in *Dur*. Other and numerous analogies may be found, and we shall leave it to your own ingenuity to find them out.

“If you therefore find an Adept inhabiting a female organism, you will be right in concluding that such an abnormal circumstance is due to some extraordinary conditions and experiences through which such an Adept has passed during his last incarnation. A plant in a hot-house will grow faster than one which is not cared for, and, likewise, extraordinary suffering may cause the early development of the flower of spirituality, which without such suffering would have taken place, perhaps, much later in some other incarnation.”

This revelation stirred up my curiosity, and I begged the lady to give me an account of her past life, such as it was before she became an Adept.

“It is painful,” answered Leila, “to dwell on the memories of the past, but perhaps our sister *Helen* will give you such an account of her life.”

The lady addressed smiled, and said: “I will certainly do so to afford a pleasure to our visitor, but my life in comparison with yours has been very uninteresting. If you will proceed with your history, I will add mine at the end.”

“Very well, then,” answered Leila; “but to

simplify matters, and to save time, I will show you its pictorial representation in the *Astral Light*. Look upon the table before you."

I looked upon the polished surface of the round marble table standing in the centre of the pavilion, and as I looked, there appeared upon its surface the lifelike image of a battle-field. There were the contending armies fighting with swords and spears, men on horseback and some on foot, knights in glistening armor, and common soldiers. Hot grows the fight; the dead and wounded cover the ground, and the soldiers to the left begin to give way, while those to the right press forward. Suddenly there appears at the left a beautiful woman, dressed in an armor, carrying a sword in one hand and in the other a banner. Her features resemble those of the Lady-Adept. At her sight the men to the left seem to become filled with strength, while their enemies seem to be stricken with terror. The latter flee, pursued by those of the left, and a shout of triumph arises, and the picture fades away.

Now there appears another picture upon the table. It seems to be the interior of a Catholic church. There is a great assembly of dignitaries

of church and state, of knights and nobles, bishops and priests, and a multitude of people. In front of the altar kneels an armored knight, who seems to be the king, and a bishop, ornamented with the insignia of his office, puts a golden crown upon his head; but by the side of the king stands again that noble-looking woman, with a smile of triumph upon her face. A solemn music is heard, but as the crown rests upon the head of the king and he arises, a thousand voices hail him, and the picture fades away.

The next picture represents a dungeon filled with instruments of torture, such as were used at the time of the Inquisition. There are some men dressed in black, and in their eyes burns the fire of hate; there are others dressed in red; they are evidently the executioners. Some people with torches appear, and in their midst is Leila bound with chains. She looks at the men in black with pity and contempt. They ask her some silly questions, to which she refuses to answer, and then they begin to torture her in a most cruel manner. I averted my sight, and when I looked again, the picture was gone.

In its place appeared another. There is a pile

of wood, and in its midst a stake to which a chain is fastened. A procession approaches, led by villainous-looking monks and guarded by soldiers. Crowds of people surround the pile, but they give way as the procession approaches. In the midst of the monks and hangman walks Leila, looking pale and emaciated from torture and sufferings; her hands are tied, and a rope is fastened round her neck. She mounts the pile and is fastened to the stake. She attempts to speak, but the praying monks dash water into her face to force her to remain silent. A hangman appears with a brand of fire; the wood begins to burn; the flames touch the body of the beautiful woman. I desired to see no more; I buried my face in my hands; I knew who Leila was.

After I had recovered from the impression which this horrible sight had made upon my mind, I expressed to Leila my admiration for her valor and virtue. I had always admired her as a historical character, and desired to see her portrait. Now she stood before me, the living original, youthful and strong, noble and beautiful, and yet, according to the views of mortals, over 450 years of age.

It is useless to attempt to conceal a thought in the presence of the Adepts. Leila observed my thought, and answered it.

“No,” she said, “I am much older than you think. I and you, and we all, are as old as creation. When the spirit began to breathe after the great *Pralaya* was over, sending out of the centre the light of the *Logos*, which called the world in existence, we lived already, and we will continue to live until this light returns to its source. Our real *I* knows no age; it remains ever young, it is eternal and independent of the conditions of time. Nor can our forms be destroyed by fire. They are the mirrors in which the spirit reflects its divine image; matter is as eternal as space and spirit, and as long as matter exists, the spirit will reflect its image therein. Spirit requires such an image for the purpose of attaining self-knowledge. A man cannot see his face without the help of a mirror; we cannot see ourselves objectively unless we step out of ourselves. This is an impossibility, because the spirit is one and cannot be divided in two. Therefore it reflects its light into matter, and sees itself in the mirror.”

“But,” I said, “your body was destroyed by

the fire. How is it that I see you before me in a visible, tangible form?"

"That which was destroyed," answered Leila, "was merely the grossest material substance of my physical organization. As the fire consumed the gross matter, my astral form arose above the fire and the smoke; it was invisible to the multitude present, whose senses are so gross that they can only perceive gross matter; but it was visible to the Adepts who were present in their ethereal forms, and who took care of me, and after a short period of unconsciousness I awoke again to external life. Gradually my body hardened again by the action of the influences prevailing in my new home, and therefore I am now as visible and tangible to you as if I were still inhabiting my gross material form."

"Then, I presume," I said, "that the astral body of every human being or animal could be so hardened, after having left the physical form, and thus the spirits of the dead could be made to appear in a tangible and visible form."

"It could be done, and it has often been done," answered Leila, "by the vile practices of the necromantic art. It can be done with the astral forms

of those who have suddenly died by accident or murder, and in whose astral forms is therefore still a great deal of molecular adhesion ; but the astral forms of those who have died a natural death, or who have died long ago, cannot be thus evoked, because their astral corpses have already been decomposed by the influences of the astral plane. But those 'materialized' forms have no life of their own, and cannot endure. They only live by the life-principle infused into them by the necromancer who performs such acts consciously, or by the *medium* who performs them unconsciously. To enable an astral form to continue to live after the death of the physical form, the former must have attained life during the life of the physical body."

"Surely," I said, "in every human being the astral form contained within the physical body has life."

"True," she answered, "but not in every human being is it the centre of life and of consciousness. In ordinary mortals the seat of life is in the blood contained in the veins and arteries of the physical form, and the astral form lives only, so to say, from the reflex of that physical life. In the Adept, the

centre of life and consciousness has been established in the organism of his soul, clothed with the astral form, and is therefore self-conscious and independent of the life of the physical body. I had already during former incarnations acquired that life and consciousness of the spirit. I was on the way to adeptship before I was born in a peasant's hut. During my childhood I had spiritual intercourse with Adepts, although I knew them not intellectually, because my intellectual activity, the result of my physical organization, was then not sufficiently perfect to understand that which my spirit perceived. But," she continued, "let us drop these metaphysical speculations, which I see fatigue your brain, and which become still more difficult of comprehension, as there is no rule without some exception, and the laws of nature are liable to produce endless varieties of modification of action. Let us hear the history of our sister Helen."

I had for a long time observed the features of this other Lady-Adept; and it seemed to me as if I had seen her somewhere, perhaps in my dreams. Yes, I remember that when I was a mere child I once had a vision, while in a state between sleep-

ing and waking, when it seemed to me as if an angel or a superterrestrial being, clad in white and holding a *White Lily* in her hand, were floating in the air over my head, extending the lily towards me. How often had I prayed in my heart to see that beautiful form again; and now, if I did not mistake, this lady was the form I had seen in my dream.

She was of exceeding great beauty; her long, black, waving hair formed a strong contrast to her plain, white, and flowing robe, covering her form with graceful folds. Her teint was pale and delicate, her profile was pure Greek; her dark eyes seemed to penetrate to the innermost centre of my soul, and to kindle there a fire of pure love and admiration without any admixture of the animal element.

“My life,” said Helen, “was one of little importance. I was born at St. Petersburg, and my father was an officer in the imperial army. He died while I was very young, and left his family in great poverty. Besides the company of my mother, my relatives, and a teacher, there was nothing to attract me to earth. My mind unfolded and revelled in superterrestrial joys; I

loved poetry ; I loved to look at the clouds sailing in the sky, and to see in them objects of beauty ; I communicated in spirit with the heroes of the past. But the development of my physical form could not keep step with the unfolding of the mind. Cold, starvation, and want hastened its dissolution. After having reached my eighteenth year, I left my wasted, consumptive form, and was kindly received by the Brothers.”

Her plain and modest tale filled my heart with pity. “And was there no one,” I said, “among your country people intelligent enough to perceive your genius and to give you support?”

“They erected a costly monument to my memory,” she answered, “after my body had succumbed. A part of the money expended for it would have procured me the necessities to prolong my life. Those who knew me while living admired my poetry and my talents, but they were poor like myself. But let that pass. The conditions under which men live are the effects of previously acquired *Karma*. My poverty and suffering were my gain. I have cause to be well satisfied with my lot.”

While the lady spoke, I scanned her features. Was it really she who had appeared to me years ago in a dream? Was it she who waved that lily as if pronouncing a blessing? Was it the magnetic current which seemed to stream through that symbol into the depths of my heart, and to call there a higher life into activity? Could that event have been a dream? Did it not fill my whole being with happiness at the time when it happened? Did its memory not remain deeply engraved in my heart, when thousands of other dreams had faded away?

Helen rose, and reaching out through one of the open spaces between the pillars, she broke a white lily flower which grew close by the wall. This she gave to me, and said, "Keep this flower; it will not fade like a dream; and when you see it you will know that I am not a product of hallucination."

I thanked her and begged her to remain my protector in the future, as she had been in the past. To this she answered: "We can only assist those who protect themselves. We can only influence those who are ready to receive our influence. We can only approach those who

spiritually approach our own sphere. Love causes mutual attraction; evil repulses. The pure will be attracted to the pure, the evil ones to that which is impure. To give presupposes the capacity to receive on the part of him who is to receive. The sunlight is open to all, but not all are able to see it. The eternal fountain of truth is inexhaustible and universal; but those who open their hearts to the sunshine of truth are few. Seek continually to rise above the sphere of animality, and you will be in company of those who have thrown off their animal elements and live in the spirit."

As the lady finished speaking, another Adept approached the pavilion. He was a man of small stature, but with a highly intellectual expression upon his face which at once indicated that he must be a *Master*. His head was almost bald on the top, and showed a most remarkable formation of his skull; at each side, however, there were gray locks of hair, and I immediately recognized in him one whose picture I had often seen and whose presence I had often felt, and whom I will call *Theodorus*. He had been a great Adept and Rosicrucian during his earthly

life; he had been a great physician, and performed most wonderful cures. He had been a great Alchemist, and knew the secret of the *Cross* and the *Rose*, of the *Red Lion* and the *White Eagle*.

As he entered, he announced that the Emperor had been called away to attend to some important affairs connected with politics in the mundane plane. He jocularly remarked that he had gone to prevent a certain statesman from committing an act of imbecility, which would, if he did not succeed in preventing it, be productive of a great war. He was therefore deputed by the Emperor to show me the alchemical laboratory and to correct some of my misconceptions in regard to Alchemy. I was rather reluctant to leave the presence of the ladies, and I would have been willing to die at that moment to enable my soul to remain in their presence; but I could not with propriety decline the invitation. The ladies permitted me to retire, and I went with Theodorus into the halls of the Monastery.

IV.

THE ALCHEMICAL LABORATORY.

WE went through a beautiful and broad corridor, all along whose sides stood finely executed marble statues representing the gods and goddesses of antiquity, and busts of the heroes of olden times. "These statues," my companion remarked, "represent the elemental principles and powers of nature, and they were thus personified by the ancients to bring the attributes of these principles within the conceptive power of the mind. None of the old Greeks and Romans, except the most ignorant, ever believed that Zeus, Pluto, Neptune, etc., were existing personalities; nor did they ever worship them as such. They were merely symbols and personifications of formless powers. Likewise, every man's form and body is not the real man; it is merely a symbol and personification of the character and attributes of the real man, a form of matter in which the thoughts of the real man have found their external expres-

sion. The ancients knew those things; it is only the modern wiseacres who mistake the external illusion for internal truths, and the form for the principle. It is modern materialistic religion which has degraded the Universal Spirit into a limited being, and the great powers of nature into Christian saints."

We entered into a circular hall in the form of a temple. It had no windows, but received its light from a cupola of clear glass. High over our heads, below the cupola, was a large interlaced double triangle made of gold and surrounded by a snake biting its tail. In the midst of the room, and directly under that symbol, stood a round table with white marble top, in the centre of which was a smaller representation of the figure above, executed in silver. The walls were ornamented with bookcases, in which were a great number of books on Alchemy. At one side of the room there was a kind of altar upon which stood a burning lamp. A couple of crucibles, a few bottles lying upon a side-table, and a couple of armchairs completed the furniture of the room.

I looked around, expecting to see some furnaces, stoves, retorts, and other implements, such as are

described in books on Alchemy, but could see none. My instructor, reading my thoughts, laughingly said: "Did you expect to find here an apothecary shop? You mistake, my friend. All this array of bottles and pots, of furnaces, stoves, retorts, mortars, filters, strainers, distilling, purifying, and refining apparatus, etc., described in books on Alchemy, is nothing but nonsense, written to mislead the selfish and vicious, and to prevent them from prying into mysteries which they are not fit to receive. The true Alchemist requires no ingredients for his processes, such as he could buy in a chemist's shop. He finds the materials which he needs within his own organization. The highest processes of Alchemy require no mechanical labor; they consist in the purification of the soul, and in transforming animal man into a divine being.

"The invisible principles of which the constitution of man is made up are called his *metals*, because they are more lasting and enduring than flesh and blood. The metals which are formed by his thoughts and desires will continue to exist after the perishing elements constituting his physical body have been dissolved. Man's animal

principles are the base metals of which his animal organization consists ; they must be changed into nobler metals by transforming his vices into virtue, until they pass through *all* colors and turn into the gold of pure spirituality. To accomplish this it is necessary that the grossest elements in the form should die and putrefy, so that the light of the spirit penetrate through the hard shell and call the inner man into life and activity."

"Then," I said, "all those alchemical prescriptions which we find in the books are only to be taken in a figurative sense, and have nothing to do with material substances, such as salt, sulphur, mercury, etc."

"Not exactly so," answered the Adept. "There are no hard lines separating the various kingdoms in nature, and the actions of laws manifested in one kingdom find their analogies in other kingdoms. The processes taking place in the spiritual planes are also taking place in the astral and material planes ; subject, of course, to such modifications as are imposed by the conditions existing upon these planes. Nature is not, as your scientists seem to believe, an agglomeration of fundamentally different objects and elements ; nature is

a whole, and everything in the organism acts and is acted on by every other thing contained therein. This is a fact which the ancient Alchemists knew, and which the modern chemists would do well to remember; for we find already in the book of *Sohar* the following passage, which I advise you to note down in your book, so that you will not forget it: *Everything that exists upon the Earth has its ethereal counterpart above the Earth* (that is to say, in the inner realm), *and there is nothing, however insignificant it may appear in the world, which is not depending on something higher* (or more interior); *so that if the lower part acts, its presiding higher part reacts upon it.*

“The *Microcosm* of Man is a true counterpart, image, and representation of the great *Macrocosm* of nature. In the former are contained all the powers, principles, forces, essences, and substances which are contained within the latter, from the supreme and divine spiritual principle, called God, down to the grossest state of the *Universal One Life*, in which it is called *Matter*. Those principles may be latent or active in either of the two organisms; they may exist merely germinally in a form, or they may be in a developed state. In

each human being are contained germinally the essences which constitute the mineral, vegetable, animal, or human kingdom; in each man are contained principles which may be developed into a tiger, a snake, a hog, a dragon, into a sage or a villain, into an angel or devil, into an Adept or a God. Those elements which are made to grow and to be developed will become the man and constitute his own self. Look at the double interlaced triangle over your head; it represents the Macrocosm with all the forces contained therein, the interpenetration and union of Spirit and Matter, within the never-ending circle of eternity. Look at the smaller symbol upon the table before you; it represents the same elements within the constitution of Man. If you can bring the double interlaced triangles existing within your own self into exact harmony with those existing in the Universe, your powers will be the powers of nature, and you will be able to guide and control by your reason and will the processes unconsciously taking place within the realm of the latter.

“The universal process, by which all the processes of life take place, is the principle of Life. He who can guide and control the power

of life to do his will is an Alchemist. He can create new forms and increase the substance of those forms. The chemist creates nothing new; he merely forms new combinations of the substances in his possession; the Alchemist causes the substance to attract other elements from the invisible storehouse in nature, and to increase. The chemist deals with matter in which the principle of life is inactive, that is to say, in which it manifests itself merely as mechanical or chemical energy; the Alchemist deals with the principle of life, and causes living forms to come into existence. The chemist may transform sulphur into an invisible air and cause that air to become sulphur again, and the sulphur obtained at the end of the experiment will be just as much in quantity as it was at the beginning; but the gardener who puts a seed in the ground and prepares the conditions necessary for that seed to grow into a tree, is an Alchemist, because he calls something into existence which did not exist in the seed, and out of one seed he may thus obtain a thousand seeds of the same kind."

"But," I objected, "it is said that the Rosicrucians possessed the power to turn iron, silver, or

mercury into gold. Surely there is no gold in pure silver or mercury; how, then, could they cause something to grow which did not exist?"

The Adept smiled, and said: "Through your lips speaks the learned ignorance of your modern civilization, which cannot see the truth, because it has created a mountain of misconceptions and scientific prejudices which now stand between itself and the truth. Let me then tell you once more that *Nature is a Unity*, and that consequently each particle of matter, even the smallest, is a part of nature in which the possibilities of the whole of nature are hidden. Each speck of dust may under favorable conditions develop into an universe in which all the elements existing in nature can be found. The reason why your scientists are unable to comprehend this truth is because their fundamental doctrines about the constitution of matter and energy are entirely wrong. Your Dualism in theology has been the cause of untold misery, creating a continual quarrel between God and the Devil; your Polytheism in science blinds the eyes and obstructs the judgment of the learned, and keeps them in ignorance. What do you know about the attributes of

primordial matter? What do you know about the difference between matter and force? All the so-called "simple substances" known to your science are originally grown out of primordial matter. But this primordial matter is a Unity; it is only *One*. Consequently each particle of this primordial matter must be able to grow under certain conditions into gold, under other conditions produce iron, under others mercury, etc. This is what the ancient Alchemists meant when they said that each of the seven metals contains the seeds of the other seven; and they also taught that, for the purpose of transmuting one body into another, the body to be transmuted would have to be reduced first into its *Prima Materia*.

"But," he continued, "I see that you are anxious to have the truth of these doctrines demonstrated by an experiment; let us then see whether it is possible that we can make gold grow out of its *seed*."

Without rising from the big armchair in which Theodorus was seated, he then directed me to take one of the crucibles upon the table, to see that it was empty, and to put it upon a tripod over the flame burning upon the altar. I did as

directed. He then said: "Now take some of the silver pieces which you have in your pocket, and throw them into the crucible. I took seven *Marks* which I had with me, and did as he said. After a few minutes they began to melt, and as I saw the silver in the crucible to have become fluid, I told the Adept that it was molten. He then indicated a small bottle containing some *red powder*, which stood upon the table, and requested me to take some of that red powder and to throw it into the crucible. There was a little silver spoon lying upon the table, and with this I took what seemed to be about one or two grains of the red powder from the bottle, and was going to throw it into the crucible, but Theodorus stopped me, saying that this was too much powder, and it should not be wasted. He told me to throw the powder back into the bottle and to wipe the spoon with a piece of paper, and then to throw the paper into the crucible. The quantity of powder which adhered to the spoon after I had returned the former to the bottle was so little as to be hardly visible; nevertheless, I did as he told me, and threw the little piece of paper upon the molten silver. Immediately the paper burned, and the molten metal

began to foam and to rise, so that I was afraid that it would run over the sides of the crucible; but each bubble burst as it reached the top, and it exhibited a variety of the most beautiful colors.

This play lasted for about fifteen minutes, when the boiling ceased, and the foaming mass sank back to the bottom of the crucible. Theodorus noticed that it had become quiet; he directed me to take the crucible from the fire and to pour the contents upon a marble slab. I did as he told, and directly the mass became solid, and appeared to be the finest gold.

“Take this gold with you,” said Theodorus, “and let it be examined, so that you will be convinced that you have not been the victim of a hallucination.”

I was very much astonished, and I thought how much our people would give to become acquainted with the secret of this *red powder*. I desired to ask the Adept how this powder could be prepared, but I did not dare to ask the question aloud, because I was afraid that Theodorus would think I desired to know the secret for the purpose of enriching myself. But the Adept saw my thought, and said:—

“The secret how this red powder is prepared cannot be explained to men until they become more spiritual; because it is a secret which cannot be merely theoretically explained, but whose knowledge must be practically acquired. How can we teach mankind to employ powers which they do not possess, and of which they do not even know the existence? Nevertheless, the germs of these powers are contained in a latent condition within the organism of every human being.

“It would be foolish to suppose that gold could be made out of any other substance than gold; but every substance contains the germ of gold in its own primordial matter.

“In the alchemical laboratory of nature, iron-pyrites and other substances produce gold in the course of ages, because the element of gold contained in their primordial element grows by the action of the life principle of nature, and grows to be visible gold. This process, which it may require unconscious Nature millions of years to accomplish, can be accomplished by Nature in a few minutes if her will power is guided by the spiritual consciousness and intelligence of the

Adept. It is as impossible to make gold grow out of anything containing no gold as it is impossible to make an apple-tree grow out of a cherry-stone. But if we wish to see an apple-tree grow out of a seed, we do not insert it in a hole bored into a rock; but we select a proper piece of soil, where it can grow by the aid of warmth and of moisture. Likewise, if we desire gold to grow out of the 'seed' or *principle* of gold, we must add the proper soil which it requires; and this 'soil' is furnished by the red powder, which contains the life principle for the production of gold. Know that there is no 'dead' substance in the universe, and that even a stone or a metal contains life in a latent form. If the life principle within such a substance becomes active, the substance may begin to form and to produce the various colors which you saw in the crucible. If the mass were cold and solid, the element of life would be slow to penetrate below the surface of the metal; nevertheless, the transmutation would gradually take place; but in the molten mass the life-giving substance becomes thoroughly mixed with the metal, ebullition takes place, and the transmutation is quickly performed.

“Why should growth and development and transmutation of form be possible only in the vegetable and animal kingdom? It is equally possible in the mineral kingdom; the only difference is that in the former it takes place within a sufficiently short period of time, so as to come within the observation of man; while in the latter these processes take place very slowly, and many generations of men may pass away before any progress in the growth of metals can be observed.

“The seed for the production of plants grows in the plants themselves; the seed for the production of animals grows in the animals; the ‘seed’ for the production of metals rests in the metals. It is not sufficient merely to melt gold to make it grow; it must be reduced to what the Alchemists call *Water*, which means its primordial matter. This is done by the addition of the red powder, of which an almost imperceptible quantity is sufficient to cause the growth of a great quantity of gold. The few atoms of powder which you used were enough and to spare to transmute your silver, as you will see if you now examine your gold, which has not

absorbed all of the red powder which adhered to the paper.”

I looked at the gold, which had now become cold enough to be handled, and, indeed, upon its surface there were some little red pearls like rubies, which seemed to indicate that they were parts of the red powder which had not been absorbed by the molten mass.

“This red powder,” Theodorus continued, “is the celebrated *Red Lion* of the Alchemists. Some call it *Sulphur*, others call it *Mercury*, some call it *Salt*. It is, indeed, each of those three, one as well as the other, for the three form a Trinity in a Unity, which is inseparable and cannot be divided.”

“Master!” I exclaimed, “teach me this secret, and I promise you that I will never use the knowledge obtained for any selfish purpose whatever. I have learned enough of Occultism to know that worldly possessions and riches are useless for the purpose of spiritual development, and that they are in truth the greatest obstacles which can be put in the way of those who desire to progress. I only desire to know the truth for the sake of the truth, and not for the purpose of obtaining

any selfish advantage. Teach me these secrets, and I will forget my own self, and devote my life to benefit the universal brotherhood of humanity."

"Very well," answered the Adept. "I will do all I can to show you the way, but you must do your own walking. To teach you the secret how to make gold is identical with teaching you all the secrets of the constitution of nature, and of its counterpart, the microcosm of man. This cannot be done in a few hours, nor within a few days, and it would be against the rules of our order to retain you here longer than after sunset. But to enable you to study this science of Alchemy, I will lend you a book which you may read and study; and if you keep your intuitional faculties open and your mind unclouded, I will be invisibly near you and assist you to understand the meaning of the secret symbols contained therein."

With these words Theodorus handed me a book containing a number of colored plates with symbols and signs. It was an old book, and its title was: "The Secret Symbols of the Rosicrucians of the Sixteenth and Seventeenth Centuries."

"The size of the book," continued the Adept, "renders it rather inconvenient for you to carry it

on your descent from the mountain, but I will send it to your hotel at the village, where you will find it at your arrival."

I thanked the Adept, and looked once more at the mysterious book. I glanced at the titles of the pages, and saw that they treated about the greatest of mysteries, of the Macrocosm and Microcosm, of Time and Eternity, of Occult Numbers, the Four Elements, the Trinity of All, of Regeneration, Alchemy, Philosophy, and Cabala; it was indeed a book on *Universal Science*.

"If you practically understand the contents of this book," said Theodorus, "you will not merely know how to produce gold out of the baser metals, which is one of the lowest, most insignificant, and comparatively worthless parts of our art, but you will know the mystery of the Rose and the Cross; you will know how to come into possession of the *Philosopher's Stone* and the *Universal Panacea*, which renders those who possess it immortal. You will then not merely know how to direct the processes of life, so as to make pearls and diamonds and precious stones grow, but you will know how to make a man out of an animal, and a god out of a man. This last

alchemical process is the one thing which is needed, and in comparison all other arts are merely play-things for children. What will it serve us to run after illusions, which will vanish in time, if we can obtain within ourselves that which is eternal and real?"

I asked the Adept whether I would be permitted to show that book to others, or to have it copied and printed; upon which he replied:—

“There are at present few people in the world who would be able to comprehend this book to its fullest extent; but there are some who desire to know the truth, and for the sake of these few you may risk to throw pearls before the swine. The symbols contained in these pages must be not merely seen and studied with the intellect; they must also be grasped by the spirit. To make this plain to you, know that each occult symbol and sign, from a mere point up to the double-interlaced Triangle, to the Rose and the Cross, has three significations. The first is the exoteric meaning, which is easily understood; the second is the esoteric or secret signification, which may be intellectually explained; the deepest and most mysterious one is the third, the spiritual

meaning, which cannot be explained, but which must be practically experienced by the spirit. This practical, internal experience is arrived at by the power of intuition, or the faculty by which the spirit often feels the presence of things which he cannot see with the bodily senses, and therefore not understand intellectually as long as he has no spiritual power. If a person once feels interior things with his heart, sees them by his internal sight, and understands their attributes through his intellect, then such a person has become illuminated, and is practically an Adept.

“As the number *Three* grows out of the *One*, likewise the *Seven* grows out of the *Three*; because by a combination of three numbers or letters four complications arise, forming with the original *Three* the number *Seven*; and thus there are not merely three, but seven, explanations of each symbol. You see, therefore, that the matter is very complicated, and requires deep study. Nor would it benefit you if I were to explain to you all the various meanings of these symbols; for to learn such explanations from another does not necessarily convey real knowledge, but is

often merely a matter of stuffing the memory with the opinions of another. Such knowledge is of the kind which is acquired in your colleges and universities, and we want none of it. Self is the man. That which he finds out by his own experience, that he *knows*, and nothing more.

“When I was an inhabitant of your world, I had many a hard rub with your doctors of medicine and of divinity, because they lived upon the ignorance of the people, and the more I enlightened the latter, the less flattering grew the bread-and-butter prospects of the former. I usually found that the more learned your doctors were, the more did they lose their reason. I live here in peace, and care little about their disputations and argumentations; but I take occasionally a glance at the world, and I do not see much change for the better.”

“Nevertheless,” I said, “you will agree that science has made a great deal of progress since those days?”

“True,” he answered, “she has progressed in some things and retrogressed in others. She has made many inventions to increase the physical comforts of man and to gratify his desires; but in

proportion as man's desires have been gratified, they have also grown, and new necessities have been created. Many of your most useful inventions, however, have not been made by the help, but rather in spite of the opposition, of your professional scientists. But of what use are all these scientific attainments for the eternal well-being of man? They are made for the comfort of the physical form, and their usefulness ceases when the physical form ceases to exist. These attainments would be all right, if men and women did not waste all their time to enjoy them, and thereby neglect the development of the metals, which are to last far longer than the physical form. ?

“Moreover, if the psychological faculties of man were developed, many of your most useful inventions would be perfectly useless; they would be displaced by far better methods, in the same sense as bows and arrows have become useless since the invention of gunpowder and guns. You are very proud of your railroads and telegraphs, but of what use are they to a man who is able to travel with the velocity of thought from one place to another, however distant that place may be. Learn to chain the Elemental Spirits of Nature to the

chariot of your science, and you may mount an Eagle and ride through the air."

"I should be very glad," I said, "if you would inform me how a person can travel with the velocity of thought from one place to another. It seems to me that the weight of the physical body would present an insurmountable impediment."

"Neither would psychically developed man need to take that cumbrous form along on such travels," answered Theodorus. "What or who is Man? Is he that semi-animal mechanism, which eats, drinks, and walks, and wastes nearly half of its life in unconscious sleep; that mass of bones and muscles, of blood and sensitive nerves, which hinders the free movements of the spirit who is chained to it; or is *the man* that invisible something which thinks and feels, and knows that it exists?"

I said, "Undoubtedly the real man is the thinking principle in man."

"If you admit this," answered the Adept, "you will also agree that the real man is in that place and locality wherein he thinks and perceives; in other words, he is there where his consciousness exists. Thinking is a faculty of the mind, and not a faculty of the physical body. Wherever our mind

exercises that faculty, there is our true habitation ; whether our physical form is there too is a circumstance which need not concern us more than it would concern us to carry a warm and heavy coat which we are accustomed to wear in winter, along on our trip while we are making a summer excursion. Thinking is a faculty of the mind, and Mind is universal. If we learn to think independently of our physical brain, we may as well exercise that faculty in one place of the universe as in another, without taking our physical body along."

"But," I objected, "how can a universal and therefore unorganized principle think, without using for that purpose an organized brain?"

"Shortsighted mortal!" answered Theodorus. "Who says that the Universal Mind is without an organization? Who has so little judgment as to suppose that the highest organized living and conscious principle in the universe is without an organization, if even the inferior kingdoms upon the face of the earth, such as crystals, plants, and animals, cannot exist without an organization? Surely the air does not think; it has no firm organization: but the Universal Mind is not air, nor is it empty space; it has nothing in common

with either, except its being everywhere present. It is the highest organized principle in the universe.

“Inferior man, in whom the consciousness of his higher spiritual self has not awakened, cannot think without the aid of the physical brain; he cannot experience a consciousness which he does not yet possess; he cannot exercise a faculty which is merely latent within his organization. But the man who has awakened to the consciousness of his higher self, whose life has been concentrated into his higher principles, which exist independently of the physical form, constitutes a *spiritual* centre of consciousness, which does not require the physical brain to think, any more than you require the use of your hands and feet for the purpose of thinking. If a person in a somnambule condition travels in spirit to a distant place and reports what he has seen there, and his observations are afterwards verified, must we not conclude that he has been at that place, and would it be reasonable to suppose that he has taken his physical brain with him and left the empty skull behind? How absurd is such an idea; but verily its absurdity does not

surpass that of your suggestion, that the universal mind is without an organization."

I was somewhat confused for having inconsiderately expressed an opinion about a subject of which I could not know anything, and the Adept, noticing my regret, continued in a mild manner: "If you desire to know the organization of nature, study your own constitution, not merely in its physical, anatomical, and physiological aspect, but especially in its psychological aspect. Study what may be called the physiology of your soul. If your foot were not an organized substance intimately connected with your brain by means of the nerves and the spinal cord, you would never be able to feel any sensation in your foot; the latter might be burned or amputated, and you would not be aware of it unless you should see its destruction or become otherwise conscious of its loss. You do not think with your foot, you think with your brain; or, to express it more correctly, you think by means of your brain. But if you were more spiritually developed, you would be able to sink your thought and consciousness from your brain down into your feet, or in any other part of your body, and, so to say, live in

that part and be entirely unconscious of any other part. It has already come to the comprehension of some of your more advanced scientists that sensation and consciousness may be withdrawn from any part of the body, either by an effort of the will and imagination of the person who undertakes the experiment, or by the aid of the will and imagination of a 'magnetizer' or 'mesmerizer.' In the same manner the opposite thing may be done, and a person may concentrate himself, so to say, in any part of his own organism, or in any part of the great organism of nature with which he is intimately and inseparably, although invisibly, connected. A man who believes that he exists independent of nature and separated from it, labors under a great illusion. The fundamental doctrine of Occultism is that Nature is only One, and that all beings in nature are intimately connected together, and that everything in nature acts upon every other thing therein. The feeling of isolation and separateness existing in individuals is only caused by the illusion of form. Man's form is not man; it is merely a state of matter in which man for the time being exists, and which is continually subject to change.

It may be compared to an image in a mirror, in which the character of man is imperfectly reflected, and although it differs from the image in a mirror in so far as it is temporarily endowed or infused with life, sensation, and consciousness, nevertheless it is nothing else than an image; for life, sensation, and consciousness do not belong to the form; they are functions of the invisible but real man who forms a part of the invisible organism of nature, whose mind is a part of the universal mind, and who, therefore, if he once realizes his true character and learns to know his own powers, may concentrate his consciousness in any place within or beyond his physical form, and see, feel, and understand what takes place in such a locality."

"These ideas," I said, "are so grand that I am not yet fully able to grasp them; but I fear that they will never be accepted by our scientists, who cannot see beyond the narrow systems which they themselves have created."

"True," answered the Adept; "they will not be accepted or understood by our present generation of scientists; but they will be known in the future to those who are not merely learned, but

wise, as they were known to the wise men of the past. Ignorance and self-conceit are twin brothers; and it flatters man's vanity to believe that he is something self-existent and different from the rest; and the more a man is learned in superficial science, the more does he believe in his own imaginary superiority and separateness. The consciousness of the great majority of intelligent people in our intellectual age is nearly all concentrated within their brains; they live, so to say, entirely in the top story of their houses. But the brain is not the most important part of the house in which man resides. The centre of life is the heart; and if consciousness does not take its residence in the centre of life, it will become separate from life, and finally cease to exist. Let those who desire to develop spiritually attempt to think with their hearts, instead of continually studying with their brains. Let them attempt to sink day after day their power of thought down to the centre of life in the heart, until their consciousness is firmly established there. At first they will see nothing but darkness; but if they persevere in their efforts, they will behold a light at that centre

which illuminates the mind. This inextinguishable light will send its rays as far as the stars; and in it they may see the past, the present, and the future.

“The greatest mysteries in nature are by no means difficult to understand, if we only prefer to look at them instead of looking at our own illusions. The grandest ideas are easy to grasp, if we merely prefer to grasp them instead of holding on to those which we ourselves have created. Man’s mind is like a mirror in which the ideas floating in the universal mind are reflected, comparable to a tranquil lake in which you may see the true images of the passing clouds. If the surface of the latter is disturbed, the images become distorted; if the water becomes muddy, the reflections cease altogether. Likewise, if the mind of man is in a tranquil state and clear of foreign elements, he will reflect the grandest and noblest ideas existing within the world of mind. If we desire to think reasonably, we should allow Reason to do her thinking within our brain; but if we attempt to be wiser than Reason, our mind becomes filled with our own illusions and those which we have

acquired, and we cannot see the truth as it is, but we see it as we imagine it to be.

“This truth you will find symbolically or allegorically represented in all the principal mythologies and religious systems of the world. It is the old story of the ‘Fall of Man.’ As long as man remained in a state of purity,—that is to say, as long as his will and imagination were one and identical with the will and the imagination of the spiritual power acting within nature,—he knew the truth and was all-powerful; but when he began to will and to imagine in a way different from that universal power, he lost sight of the truth and could see only his own illusions. If man wants to see the truth again, he must give up his own way of thinking and reasoning and let Reason will and think in him. But you may as well ask a miser to give up the treasure which he has collected and hoarded during a lifetime as to ask a modern scientist or philosopher to give up his own way of thinking. I see in your heart a desire to establish a reasonable society; but let me warn you that if you attempt to accomplish this by appealing to the learned, you will have selected the most unreasonable method to accom-

plish your purpose, and you may be certain that it will fail."

"I acknowledge," I said, "that I have been thinking of finding means to establish such a society, or a school for spiritual development, where those who desire to progress might be able to spend their energies for the purpose of that which is useful and lasting, instead of being forced to run after the illusions of the world. I have been mentally seeking for a place in a solitude where the members of such a society might lead an interior life. I should like to establish a theosophical monastery, where we could live like yourself, surrounded by all the grandeur, sublimity, and stillness of nature, escape the servitude of fashionable society, and step on the path to adeptship. But surely I could not think of selecting our members from the ranks of the uneducated and ignorant."

"Select them among those who are pure and virtuous," answered Theodorus, "and your choice will be well made. Choose those who have no preconceived opinions and prejudices, teach them the processes how to develop their spiritual powers of perception, and you will soon have the

most enlightened society in the world. That which is to-day called learning and education is merely a very laborious method of acquiring a little superficial knowledge which mankind is forced to adopt because they do not know how to develop their spiritual faculties. If the latter method were taught and practised, real knowledge would soon occupy the place of mere learning, certainty the place of belief, conviction the place of opinion, true faith the place of creed. If every inhabitant of your proposed monastery had no way of willing and imagining of his own, but if they all were living mirrors in which Divine Wisdom is reflected without any adulteration, such a monastery would be the greatest ornament of the world. Such centres of spiritual intelligence would be like suns of first magnitude on the mental horizon of the world. One such centre would be sufficient to illuminate the world with its wisdom and to send its intellectual rays to the utmost limits of the planet."

"And what is to hinder the establishment of such a centre of intelligence?" I asked.

"Nothing but the imperfections of man," answered the Adept. "There are two sources from

which the obstacles arise, which are in the way of those who desire to attain self-knowledge and immortality. One class of obstacles arises from man's interior self, the other from the external conditions in which he lives. The internal obstacles are caused by his acquired scientific or theological prejudices and misconceptions, and by the living elemental forces active within the animal principle in the constitution of man. As they are fed and grow strong by external influences, they manifest themselves in various ways, producing animal impulses, and in combination with the intellectual acquirements they grow into the more dangerous class of vices, such as ambition, vanity, greed, intolerance, selfishness, etc. Each of these animal elements, or *Elementals*, may grow into an intellectual but unreasonable being, and finally constitute the very *Ego* of man. Man may have a great many such *Ego's* within him, until perhaps one of these overmasters the others and becomes the king in the realm of his soul. Each of these *Ego's* absorbs a share of the life and consciousness of the man in whose soul it exists, and may finally even occupy all space within the intellectual sphere of the latter, so as to paralyze reason or drive it

away. The world is crowded with such intellectual or semi-intellectual Elementals in human shape, in whom reason has been paralyzed to a greater or lesser extent. You see them every day in the streets, in the pulpit, the forum, in the halls of learning, as well as upon the market-place. Man's principal object in life should be to keep the realm of his mind free from such intruders, so that the king of reason may rule therein without being impeded. His duty is to fight the Herculean battle with those animal and intellectual Elementals, so that they will become servants of the king, and not become his masters. Can this be accomplished if all our energies are continually employed on the outward plane; if we are never at home within ourselves; if we are continually engaged with the illusions of life, either in the pursuit of sensual gratification or in the so-called intellectual pursuits, tending to give us knowledge of outward things but conveying no knowledge of self? Can we expect to accumulate our energy and employ it at the centre within ourselves, if we continually spend it at the periphery? Can we hope to be able to spend all our power, and at the same time to be able to retain it? An affirmative answer would be as irrational as unscientific.

“A power to become strong at the centre must be directed towards the centre ; for it is only by resistance that it can accumulate and become strong. A king who goes away from his kingdom and leaves it without protection may find other rulers there when he attempts to return. To become conquerors over nature we must fight our own battles, and not wait until nature fights them for us. The more the animal elements within man’s constitution are stimulated into life and activity by the temptations coming from the external world through the avenues of the senses, the hotter will be the battle, and the stronger will man’s reason grow if he successfully resists. This is the battle which the great *Gautama Buddha* fought, and of which he came out victorious, because he was overshadowed by the *Bo-tree* of Wisdom.

“I will attempt to give you a rational and scientific explanation of the effects of inward concentration of mind and introspection ; and, that you may not think I am revealing secrets which ought not to be revealed to the uninitiated, I refer you to the books of the great Greek philosopher *Plotinus*, who revealed them long ago, but whose ideas are still far beyond the grasp and understanding of your modern lights of wisdom.

“According to that philosopher, there exists nothing in the universe but ‘*God* ;’ but if this word does not please you, because it has for ages been subject to misconceptions, and because, if we speak of God, the people will insist in imagining that we are referring to an external and personal god, which is an absurdity, because no place can be found in nature for such a god, — let us call it the ‘*Real*.’

“According to Plotinus nothing has any real existence but the Real, and all the phenomena in this universe are merely illusions created by the internal activity of the Real. No man can see his own face without the aid of a mirror, and likewise the Real, when it awakes from its sleep after the great Pralaya, cannot see itself without the aid of a mirror. There is no other substance but that which belongs to the Real, to serve as a mirror ; and therefore the Real, so to say, steps out of its own centre and looks within itself, and thus an intellectual activity is created, by which the Real perceives the images existing within its own substance ; and this activity going from the periphery towards the centre is called the *Universal Mind*. The same process takes place if a person by the

power of introspection directs his thoughts towards his own centre of consciousness existing in his 'heart,' and thus attempts to see what is going on within himself. Now this activity going towards the centre could never have created an external world, because the external world exists, so to say, on the periphery, and requires a centrifugal power to call it into existence. The intellectual activity of the Universal Mind is a centripetal power, and could therefore not act from the centre towards the periphery. But you know that every action is followed by a reaction. The centripetal power finding resistance at the centre, returns and evolves a centrifugal activity, and this centrifugal power is called the *Soul*. This *soul-energy* is the medium between the centre and the periphery, between Spirit and Matter, between the Creator and his creations, between God and Nature, or whatever names you may choose to give to it. The *Soul* is the product of the centrifugal activity of the Universal Will, put into action by the centripetal activity of the Universal Imagination. If these plain facts, expressed in plain language, without any scientific jargon, without circumscriptions, philosophical circumvolution and modern gibberish,

(What does he mean?)

are comprehensible to you, all you have to do is to apply it to man, who is the microcosmic counterpart of the great macrocosm of nature. If you direct the power of your mind inwardly towards your centre, instead of letting it fly off into the external sensual world, the resistance which it finds at the centre will cause a reaction, and the stronger the centripetal power which you apply, the stronger will be the centrifugal power created; in other words, the stronger will your *Soul* become, and, as the latter grows strong, its invisible, but nevertheless material, substance will penetrate your physical, visible body, and serve to transform it into a higher kind of matter. Thus you may at the end become all *Soul*, and have no gross physical body. But long before that time arrives, you will be able to act upon matter by the power of your soul, to cure your own bodily ills and those of other people, and to do many wonderful things, even at distances far away from your visible form; for the activity of the soul is not limited by the circumference of the physical form, but emanates far into the sphere of the Universal Mind."

I told Theodorus that these ideas were as yet

too grand and too new to me, to be grasped immediately; but that I would attempt to remember them and to meditate about them in the future.

“You will do well if you do so,” said the Adept, “and I will take care that they remain in your memory.”

“If the doctrines of Plotinus are true,” I asked, “then it would seem that the vast majority of our thinkers are continually thinking the wrong way; because they are engaged all their lives in prying into external things, and do not seem to care a straw about what is taking place within themselves.”

“Therefore,” answered Theodorus, “they will perish with their illusions; and the Bible is right in saying that the ways of the worldly-wise are foolishness in the eyes of the Eternal.

“What will it serve you, if your head is full of intellectual rubbish and speculations about the details of the phenomenal illusions of life, and you become a senile imbecile in your old age? What will it serve you, roaming about the world and gratifying your curiosity in regard to its details, and, if your external senses perish and you attempt to return to your house, you find it occupied by

wild animals? Perhaps it would be better for the learned if they knew less of scientific theories and had more practical self-knowledge. It would be better if they had fewer scientific speculations and more spiritual power. If they were to employ, for instance, their time and energy for the development of the spiritual power of clairvoyance, which they spend to find out the habits of some species of African monkey, they would fare better by it. If they were to obtain the power to heal the sick by the touch of their hands, instead of seeking new methods to poison humanity by inoculations of injurious substances, humanity would be the gainer. There are thousands of people who work hard all their lives, without accomplishing anything which is useful at the end. There are thousands who labor intellectually or mechanically to perform work which had better be left undone. There are vastly more people engaged in undermining and destroying the health of man than by curing his ills, more engaged in teaching error than in teaching the truth, more trying to find that which is worthless than that which is of value; they live in externals and will perish in the externals; they run after money,

and the money will live, while they themselves die.

“The obstacles which arise from the external world are intimately connected with those from the inner world, and cannot be separated; because external temptations create inward desires, and inward desires call for external means for gratification. Still, there are many people who do not crave for the illusions of life, but who have not the strength to resist them. Many have a desire to develop spiritually and to gain immortality, but they believe themselves forced by external circumstances, which they dare not resist, to employ their time and energy for the attainment of worthless things, instead of using their strength to dive down into the depths of the soul to search for the priceless pearl of wisdom. Thousands of people have not the moral courage to break loose from social customs, ridiculous habits, and foolish usages, which they inwardly abhor, but to which they nevertheless submit because they are customs and habits to act against which is considered to be a social crime. Thus thousands sacrifice their immortality to the stupid goddess of fashion.

“Who dares to break loose from the bondage imposed upon him by fashion, and to exchange for it the freedom of eternal life? Who dares to face the calumny and the contempt of the ignorant, to obtain in its place the applause of the wise? Who has the courage to incur the sneers of the imbecile, the ridicule of the ignorant, the laughter of the fool, and gain thereby a light of whose existence those who live in eternal darkness know nothing? But the vast majority of people drown the voice of reason by the speculating power of the intellect. Rather than have their vanity suffer, they allow the spirit to starve; rather than be crucified and to resurrect into immortal life, they submit to the galling chain; they lose their appreciation of liberty, and, becoming used to their chains, begin to love them and to impose them upon others; thus proving true the saying of the poet, —

‘It is the curse of every evil act,
That it forever must give birth to evil.’

“I am not a believer in total depravity of the human nature; I know that man’s animal principles, on account of their inherent instinctive efforts for the preservation of their existence, are

opposed to the development of his higher principles, because the life of the higher involves the death of the lower; but I also know that in each human being is contained a power for good, which may be made to develop if the proper conditions are given. There are elements of good and elements of evil in every man, and it depends on ourselves which class we desire to develop. From a cherry-stone nothing can grow but a cherry-tree, from a thistle-seed nothing else than a thistle; but man is a constellation of powers in which all kinds of seeds are contained; you may make him grow to be a hog or a tiger, an angel or a devil, a sage or a fool, according to your own pleasure.

“The continual rush after more money, more comfort, more pleasure, after we already possess all we require, and which characterizes our present civilization, is not necessarily a sign of greed, viciousness, and moral depravity; but it is rather caused by the instinctive impulse, inherent in the constitution of man, to reach something higher and better, which expresses itself on the physical plane. Man intuitively knows that, no matter how rich in money or fame he may be, he has not

yet reached a state in which to be contented and to rest ; he knows that he must still keep on striving for something, but he does not know what that something is. Not knowing the higher life, he strives for more of those things which the lower life affords, and thus wastes his energies for the attainment of things which are useless to him. Thus we may see a bug or a butterfly falling into a lake, and in its vain efforts to save itself from drowning swimming away from the shore, because it does not know in which direction the means for salvation exist. Thus the curse of the world and the root of all evil is ignorance. The curse of man is his ignorance of his essential nature and final destiny, and the efforts of a true system of religion and science ought to be above all to remove this ignorance.

“But it is also true that ignorance and conceit are closely connected together, and that the ignorant hate him who is wiser than they. If one man, knowing more about the requirements of his nature, and desirous to employ all his energies for the attainment of a higher state, were to dare to assert his manhood and to rebel against the chains of fashion, could he continue to live unmolested

in his community? and if he were to emigrate to another, would he not be exposed there to the same troubles? He would still come in contact with men who hated the light because they were educated in darkness, who would misunderstand him, suspect his motives, and persecute him; and woe to him if he had any human failings upon which the snake of slander could fasten its poison fangs. Wherever darkness exists, there exists abhorrence of light. Wherever ignorant man enters, there enter his imperfections. Wherever ignorance resides, there are her attending angels, suspicion, envy, and fear. Would it not be more within the scope of a true science to enlighten man about his true nature, than to invent theories regarding the causes of phenomena which she does not know and which she cannot prevent?

“ That which is almost impossible to accomplish by the unaided efforts of a single individual, may often easily be accomplished by the co-operation of many, and this law seems to prevail in all departments of nature. If a sufficient number of people were determined to retire from the harlequin stage of the world and to turn away from the tomfooleries of a fashionable existence, they might,

if they could harmonize with each other, form a power sufficiently strong to repel the attacks of the monster which would devour them all if they were separated and unaided by each other.

“There have been at previous times, as there are now, numerous people who became convinced that there is a higher and inner life, and who desired to surround themselves with such conditions as were most favorable for its attainment. Such people were not merely to be found in Christian countries, but also among the ‘heathen’; and thousands of years ago lamaseries and lodges, orders, monasteries, convents, and places of refuge have been established, where people might strive to attain a higher life, unimpeded by the aggressions and annoyances of the external world of illusions. Their original purpose was beyond a doubt very recommendable. If in the course of time many such institutions have become degraded and lost their original character; if instead of being places for the performance of the noblest and most difficult kind of labor, they have become places of refuge for the indolent, idle, and superstitious; it is not the fault of that principle which first caused such institutions to be organized, but it is the con-

sequence of the knowledge of the true nature of man and his powers and destiny having been lost, and with the loss of that knowledge the means for the attainment, the original aim was naturally lost and forgotten.

“Such a degradation took place in Europe, especially during and after the Middle Ages, when, enriched by robberies and endowed by dying thieves who wanted to buy salvation, they amassed great wealth and lived a luxurious life, feasting on the fat of the land. They then knew nothing more of the conditions of a higher existence; they became centres of attraction for the hypocrite and the idle. They passed away their idle hours in pious amusements and in striving to gain material wealth. Instead of being centres from which blessings should spread over the country, they became a plague to the land. They robbed the rich, and, vampire-like, they sucked the last drop of blood out of the poor. They continued in this manner until the cup of their crimes was full, when the great Reformation caused the downfall of many and the reform of the rest.

“There are still numerous convents existing in Europe, and in America their number is on the

increase. The modern reformer, the socialist and materialist, looks upon them with an evil eye; but the unprejudiced observer will not deny that some of them are doing a great deal of good in their own way. Some have established schools, others opened hospitals; and above all are the *Sisters of Charity* unsurpassed in their usefulness in the care for the sick. Thus some of these orders serve the noble purpose of benefiting humanity, and their usefulness could be increased a thousand-fold if the light of spiritual knowledge — the Holy Ghost, to whom they pray — were to be permitted to descend upon their ranks.

“Do the religious orders as they are now fulfil their original purpose of raising man up into a higher and spiritual state of existence, or are they merely centres around which pious and benevolent people have collected who teach schools and nurse the sick, — occupations which might perhaps equally well be performed without confessing any particular creed? If the religious convents are calculated to develop true spirituality and to produce truly regenerated men and women, they will be the places where we may find some manifestations of spiritual powers; for a latent power

which never manifests itself is of no use ; it cannot exist in an active state without manifesting itself. Let us therefore be permitted to ask : Do the inhabitants of our convents consciously exercise any spiritual powers ? Can they knowingly cure the sick by the touch of their hands ? Are their inner senses sufficiently opened, so that they may see and hear, taste, smell, and feel things which are imperceptible by the senses of average man ? Can they prophesy, with any degree of certainty, future events, except by the conclusions of logic ? Are there any among them who have become Adepts ? What do they actually know about the conditions required to enter a higher state of consciousness than that of ordinary mortals ? What do they know about the means to enter adeptship and to obtain a conscious future existence ? What do our monks and nuns know about the constitution of the human soul, and especially of those souls who are entrusted to their care ? What are their experiences when in that higher state called ecstasy ? If there is one among them who enters into a state of trance, or is levitated into the air, or serves as an instrument for the production of a simple mediumistic phenomenon, do they know

the causes which produce such effects, or is such an occurrence considered to be an unexplainable or supernatural miracle? Is not the person to whom such a thing happens considered a saint?

“It is useless for them to assert that they can forgive sins, or that sins can be forgiven through them; for such an assertion can neither be proved nor disproved intellectually: it will always remain a mere matter of opinion. If they do not possess any spiritual powers, we cannot believe that they are able to communicate them to others; and if they do communicate any such powers upon others, where are their effects to be seen? Do the ignorant become wise after having been baptized with water? Do those who have submitted to the ceremony of confirmation obtain true faith? Does the sinner become innocent after having the load taken off from his conscience by means of absolution? Can our clergymen change the laws of nature? Can they by any external ceremony cause the growth of an inner principle? or does he who enters a church an animal, come out an animal still?

“These are perplexing questions, and I would not like to be understood as if I desired to throw

any discredit upon the motives of any of the inhabitants of our convents and nunneries. I am personally acquainted with many of them, and I usually found them to be good and kind and well-meaning people, without that priestly pride and arrogance which unfortunately often characterize the clergyman of the world; but I believe that all the good which they do they could perform as well, and even a great deal better, if they were to undertake the study of the soul, its organization and functions, and if they were qualifying themselves for that study. They would then be able to develop consciously those higher faculties which have spontaneously developed among some of their members, who on account of such an unexpected and abnormal development were called miracle-workers or saints.

“How can any one be a true spiritual guide who has no spiritual powers, and who, perhaps, does not even know that such powers exist? What would you think of a surgeon who knew nothing whatever of anatomy? what of a physician who did not know his patient? what of a blind painter, a deaf musician, an imbecile mathematician? What shall we think of a physician

of the soul who knows nothing at all about the soul or its attributes, who has never seen it, and merely is of the opinion that it exists? Have we not a right to doubt the usefulness of such a physician, and exclaim with Shakespeare,—

‘Throw physic to the dogs; I’ll none of it’?

If the inhabitants of our convents and monasteries, instead of employing the time and energy which they need for the performance of their customary ceremonies, for the saying of rosaries and the repetitions of litanies, etc., were to employ them for the purpose of acquiring self-knowledge, for the study of the essential constitution of man and of nature, and for the acquisition of spiritual power, their usefulness might be extended to an enormous extent. Their knowledge would be no longer restricted to earthly things, but expand to heaven; they would not need to nurse the sick, for they could cure them by the touch of their hands; they would not need to baptize people with water, for they could baptize them with the spirit of sanctity; they would not need to listen to confessions, for they would be able to read the thoughts of the culprit. Why should

they not be able to do their duties much better if they were wise instead of ignorant; if they knew the truth instead of blindly accepting a creed; if they had the power to accomplish that which they now expect an invisible and unknown power to accomplish in response to their prayers? If the public believe that there is one miracle-working saint at a convent, do they not rush there to receive his or her blessings? What would be the fame of a convent composed entirely of saints whose powers could not be doubted?

“But how can monks and nuns acquire such powers? How can they qualify themselves for such a study? It has been said that it is ten times more difficult to remove an old error than to find a truth; and there lies the difficulty. A page which is already full of writing will have to be cleaned before it can be written upon again. They would have to purge their minds of all dogmatism and sophistry before they can see the truth; they would have to become like children before they can enter the kingdom of heaven within their own souls. They would have to remove the mountain of rubbish which has accumulated in time in the vestibule of the temple,

consisting of errors and superstitions, and in the corpses of forms from which the spirit has fled. Ages of ignorance have contributed to its growth, and it has become venerable by age. The inhabitants of the convent bare their heads and bend their knees when they approach that pile, and they do not dare to destroy it. To become wise, they would have to learn the true meaning of their own doctrines, symbols, and books, of which they at present merely know the outward form and the dead letter. They would have to form a much higher and nobler conception of God than to invest him with the attributes of semi-animal man. They would have to base their moral doctrines upon the intrinsic dignity of the divine principle in man, instead of appealing to the selfish desires of man and to his fear of punishment, to induce him to seek his salvation.

“This may be accomplished in the far-distant future, but not at the present time. Ages and centuries will roll away before the sunlight of truth will penetrate through the thick veil of materialism, which, like an icy crust, covers the true foundation of human religions. Look at the ice-fields of the Alps, covering the sides of the

mountain, sometimes many miles in extension. They extend in solid blocks, perhaps more than a hundred feet thick, down to the valley. They are the products of centuries; and firm as the rock the ice appears; and yet these rigid and apparently immovable masses move and change from year to year. They grate the rocks upon which they rest, and they throw out that which is foreign. There may cracks and fissures be seen at the top, and if, as happens sometimes, a man falls in one of these fissures, his remains may be found many years afterwards at the foot of the glacier, below the field of ice, having been spewed out by the latter.

“Change, slow change, is going on everywhere in nature. Even in the most rigid and orthodox religious systems, in the most benighted hearts and heads, there is going on a continual change. Already the doctrines which were expounded in the pulpits of the Middle Ages have been modified to a certain extent. The proportions of the devil have shrunk so much that the people have almost ceased to fear him, and in the same degree as clerical power has diminished, the conception of God has assumed a grander aspect. Already the

necessity of performing humanitarian labors has been to a certain extent recognized, and is by some considered to be of almost equal importance to the performance of the prescribed ceremonies. Still the change goes on, gradually but slowly; for there is a powerful giant who by his negation resists the decay of the pile of rubbish, and the name of this giant is *Fashion*. It is fashionable to support certain things, and therefore the masses support them.

“Is the progressive part of the world going to wait until the legally appointed guardians of the truth have found out the true value of the treasure in their possession? Have we to wait until they have cleaned the jewel from the dark crust which they have permitted to accumulate around it for centuries? Messengers have arrived from the East, the land of light, where the sun of wisdom has risen, bringing with them costly moonlight pearls and treasures of liquid gold. Will their untold wealth be intrusted to the safe-keeping of those who possess the old and empty forms, or will the new wine be filled in new casks, because the old ones are rotten?

“But why should those who have begun to see

the dawn of the day close their eyes and wait until the blind would inform them that the sun is rising over the mountains? Is love of the truth not strong enough to accomplish that which the fear of a dread hereafter has been able to accomplish? Cannot the enlightened classes establish lay-convents, which would offer all the advantages of orthodox convents without the disadvantages of the latter? Could they not establish a garden, where the divine Lotus-flower of wisdom might grow and unfold its leaves, sheltered against the storms of passion raging beyond the walls, watered by the water of truth, whose spring is within; where the *Tree of Life* could unfold without being encumbered by the weeds of superstitions and errors; where the soul could breathe the pure spiritual air, unadulterated by the odor of the poison-tree of ignorance, unmixed with the effluvia of decaying superstitions; a place where this Tree of Life, springing from the roots of the Tree of Knowledge, could grow and spread its branches, far up in the invisible realm where Wisdom resides, and producing fruits which cause those who partake of them to become like God and immortal."

Here the Adept paused, as if in deep meditation; but after a moment of silence he said: "Yes, by all means establish your theosophical monastery, if you can find any inhabitants for it; for it will be easier to introduce the truth into a house which is not occupied, than into one which is occupied by its enemies."

"But," I objected, "such an institution would require an Adept as a teacher. Would you consent to teach?"

To this Theodorus answered, "Wherever there is a want, the supply will not fail to come, for *there is no vacuum in nature.*"

At this moment I heard again the sound of the invisible silver bell in the air, and the Adept, rising, said that he was called away for a few minutes, and invited me to remain until he should return. He left the laboratory, and I remained alone. I amused myself in looking over the book containing the *Secret Symbols of the Rosicrucians*, and my attention was attracted by the sign of a *Pentagram* turned upside down, so that the two points of the lower triangles pointed upwards. At this moment a voice sounding behind my chair said: "In this symbol is contained eternity

and time, god and man, angel and devil, heaven and hell, the old and the new Jerusalem with all its inhabitants and creatures.”

I turned, and I saw by my side a man with an extremely intelligent face, dressed in the habit of a monk. He excused himself for causing an interruption in my thoughts, and said that I seemed so deeply engaged in meditating over those figures that I had not observed his entrance.

The open countenance, the pleasant looks, and the intelligent expression of the face of my visitor at once gained my confidence; and I asked him who he was, with whom I had the honor to speak.

“I am,” said the stranger, “the *Famulus*, or, as you well may call it, the *Chela*, of Theodorus. They call me jocularly his intellectual principle, because I have to do his work when the old gentleman is asleep.”

I found this remark very funny; and the stranger offered to show me all the curiosities of the laboratory, a proposition which I gladly accepted. He showed me many curious things. Of some of those I had read in books on Alchemy; others were entirely new to me. At last we came

to a closed shrine; and my curiosity led me to ask what it contained.

“Oh!” answered the monk, “this shrine contains some powders for fumigations, by the aid of which a man may see the *Elemental Spirits of Nature*.”

“Indeed!” I exclaimed. “Oh, how I should like to see these lovely spirits! I have read a great deal about them in the books of Paracelsus; but I never had an opportunity to see them.”

“They are not all of them lovely,” said the monk. “The *Elementals* of Earth have human forms. They are small; but they have the power to elongate their bodies. These *Gnomes* and *Pigmies* are usually ill-humored and cross; and it is just as well to leave them alone, although sometimes they become very good friends of man, and even may show him hidden treasures and mines. The *Elementals* of Air, the *Sylvans*, are of a more agreeable nature; still we cannot rely upon their friendship. The *Salamanders*, living in the element of Fire, are ugly customers, and it is better to have nothing to do with them. But the *Nymphs* and *Undines* are lovely creatures, and they often associate with man.”

“I wish I could see those beautiful water-sprites,” I said; “but I am inclined to believe that they belong to the realm of the fable. For many years, accounts given by seafaring men spoke of mermen and mermaids, which they insisted to have seen at a distance. They said that those people were like human beings, of whom the upper part resembled a man or a woman, while the lower part of their body was a fish. They told great stories about their beauty, their waving hair, and how finely they could sing; and they called them sirens, because it was said they could sing so well that men who heard their voices would become oblivious of everything else than their songs. At last, such a siren was caught; and it proved to be nothing else than a curious fish of the species called *Halicore Catacca*, which at a distance may be mistaken for a man, on account of its color, and which barks somewhat like a dog. Perhaps those Undines and Nymphs are also nothing but fishes.”

“This is a most erroneous opinion, my dear sir,” answered the monk. “The Halicore is a fish; but the Nymphs and Undines are elemental spirits of nature, living in the element of water,

being, under ordinary circumstances, invisible to man, and which can therefore not be caught in this manner. They are almost like human beings, but far more ethereal and beautiful; and under certain circumstances they may be seen by man. They may even attain a permanent material form and remain on land; and a case is even known in which a certain Count Stauffenberg married such a nymph on account of her beauty and lived with her for more than a year, until some stupid theologian frightened him by telling him that his wife was a devil. The count at that time had fallen in love with some good-looking peasant-girl, and so the interference of the preacher was welcome, and he took this as a pretext to drive his true wife away. But she revenged herself; and on the third day after his second marriage the count was found dead in his bed. These nymphs are very beautiful. They are strong in love, and are constant; but they are also said to be very jealous."

The more the monk spoke about the Water-nymphs, the stronger grew my desire to see them. I begged him to make a fumigation with the mysterious powder, and he at last consented. Putting

a few pieces of dry *maple-tree* bark and a few dried leaves of *laurel* into a brazier, he added some pieces of charcoal and lighted them. He then strewed some of the mysterious powder, and a white smoke arose, filling the room like a mist and with a very sweet odor. The objects in the laboratory could soon be seen only dimly through that mist, and soon disappeared altogether. The walls of the chamber were no more to be seen. The air seemed to be put in a vibratory motion and to become more dense; but, far from feeling oppressed by this, I felt a great exhilaration and satisfaction. At last I knew I was in the element of water, and was supported by it. I was swimming, but my body was as light as a feather, and it required no effort whatever to keep me from sinking; it seemed as if the water was my own element, as if I were born in it. A light shone directly above my head. I rose up to the surface and looked around. I was in the midst of the ocean, dancing up and down with the waves. It was a bright moonlight night. Right above me stood the full moon and threw her silvery rays upon the water, causing the ripples and the foamy crests on the tops of the waves to sparkle like liquid silver or diamonds. Far in

the distance appeared the coast with a mountain range, which seemed familiar to me. At last I recognized it as the coast of the island of Ceylon, with the range of mountains beyond Colombo and Galle; surely I could not mistake, for I recognized the *Adam's Peak*.

Never shall I forget the agreeable sensation caused by that ethereal bath in the moonlit sea in the Indian Ocean. It seemed to me that at last my wish had been fulfilled, and that I was free of my mortal body and its weight; and yet I was myself. I could see no difference between the body I inhabited now and the one I inhabited before the fumigation was made, only my present body was so light that it seemed as if it would float in the air as easily as it did upon the water.

Listen! some faint sound is brought by the breeze; it seems to be a human voice. It comes nearer, and now I hear it plainly; it is the melodious song of a female voice. I look in the direction from which the sound seems to come, and I see three forms floating upon the waves, rising and sinking and coming nearer. They seem to play with each other, and as they approach I behold three beautiful females with long, waving

hair; but the one in the middle surpasses the others in beauty. She seems to be the queen, for she wears a wreath of water-plants upon her head. Still nearer they come. Now they seem to see me and stop. They consult together, but curiosity seems to conquer their fear. They come quite close and speak to me. Their voices are full and melodious, their language is foreign to me, and yet I understand what they say. Having discovered that I am a mortal, they seem as anxious to cultivate my acquaintance as I am anxious to be on friendly terms with them.

They invite me to go with them to their home; they speak of their palace constructed of beautiful shells among the coral-reefs in the depths of the ocean; of the milk-white pearls with which they have ornamented the walls; of the azure blue of the waves shining through the transparent walls of their houses; and the curious things which no mortal ever had seen. I object, and tell them that I am mortal and that I could not live in their own element; but the beautiful queen, rising out of the water up to her waist, smiles and shakes her charming head, and fluid diamonds seem to stream from her waving locks. "Come," she

whispers; "no harm will befall you, for my love shall protect you." She extends her beautifully shaped arms towards me and touches my shoulder, and at her touch my consciousness fades away. A voluptuous sensation pervades my whole being. I feel that I am dissolving in the element of water; I only dimly hear the distant thunder of the breakers as they roll upon the sandy beach. I feel that my desire has been fulfilled, — a moment, and I know nothing more.

V.

THE END.

I HAVE little more to add to my tale. I awoke, and, opening my eyes, I found myself stretched upon the moss, in the shadow of that mighty pine, where I had evidently fallen asleep. The sun stood still high above the western horizon, and far up in the sky two vultures described long-drawn spirals in the air; and in their cries I seemed to recognize the voice of the queen of the Nymphs. On the opposite side of the valley was still the rushing waterfall with the foaming basin, and the spray still rose in the air, and the water still flew over the moss-covered edge.

“Alas!” I exclaimed, “has all I have seen been nothing else than a dream? Has that which seemed so beautiful and real been merely an illusion of my brain, and have I now returned to real life? Why did I not die in the arms of the queen, and thus save myself this horrid awakening?”

I rose, and, as I rose, my eye fell upon the bud

of a *White Lily* sticking in a button-hole of my coat. I could not believe my eyes, and suspected that I was again the victim of a hallucination. I grasped the Lily. It did not vanish in my grasp; it was as real as the earth upon which I stood; it was of a kind which does not grow in these cold mountainous regions; it only grows where the air is mild and warm. I remembered the gold; I put my hand into my pocket, and there, among the few remaining silver pieces, I found a solid lump of gold as bright as the purest; but the little ruby pearls had dropped off from its surface and were lost. I then recollected the precious book which the Adept had promised to send to my room in the village inn; but somehow it seemed to me that I had committed an indiscretion during the absence of Theodorus by prying into the secrets of his laboratory and listening to the temptations of the Famulus. I felt as if I did not deserve the favor, and was doubtful whether or not he would send me the book.

I flew more than I walked down the mountain, along the road leading toward the village. Little did I now care for the scenery; neither for the mountain tops, which were gilded by the rays of

the setting sun, nor for the murmuring river. It grew dark; and the full moon arose over the hills, looking exactly like the moon I had seen some hours before in the Indian Ocean. I calculated about the difference of time between Germany and Ceylon, and I found that indeed I might have seen the moon shine in the Bay of Bengal while the sun was shining in the Alps.

I arrived at O., little heeding the astonished looks of the villagers, who may have believed me insane as I hurried through the streets. I entered the inn, rushed up stairs to my room, and, as I entered, I saw upon the table the precious book, "The Secret Symbols of the Rosicrucians of the Sixteenth and Seventeenth Centuries." On the fly-leaf were written a few lines in pencil, saying:—

"Friend, I regret that you left our home so abruptly, and I cannot invite you to visit us again for the present. He who desires to remain in the peaceful valley must know how to resist all sensual attractions, even those of the Water Queen. Study this book practically, bring the circle into a square. Mortify the metals, calcimate and purify them of all residua. When you have succeeded, we shall

meet again. I shall be with you when you need me.

“Yours fraternally,

“THEODORUS.”

It may be imagined that, in spite of my fatigue, I did not go to sleep very early. I walked up and down in my room, thinking over the events of that memorable day. I tried to find the line between the visible and invisible, between the objective and subjective, between dreams and reality, and I found that there was no line, but that all these terms are merely relative, referring not merely to the conditions of things which appear objective or subjective to ourselves, but to our own conditions, and that while in one state of existence certain things may appear real to us and others illusive, while in another state the illusions become real, and that which before seemed to be real is now merely a dream. Perhaps our whole terrestrial life will seem to be at the end nothing else than a hallucination.

As I walked about the room I observed a Bible belonging to my host lying upon a cupboard. I felt an impulse to open it at random and to see what it said. I did so, and my eye fell upon the

twelfth chapter of the second epistle of the apostle Paulus, written to the Corinthians, where it said:
“I knew a man in Christ, above fourteen years ago (whether in the body or whether out of the body I cannot tell; God knoweth); such a one was caught up into paradise and heard unspeakable words, which it is not lawful for a man to utter.”

Archæology, Magic, Etc.

The Book of Dreams; being a Concise Interpretation of Dreams. By RAPHAEL, the Astrologer of the Nineteenth Century. In his preface Raphael says, "Dreams in my opinion, are caused by the Soul—that is, when the sensual and mortal parts of man are, as it were, dead, then the Soul shines forth, and produces certain impressions upon the brain; these impressions being Dreams. If dreams are not caused by some occult agency, how is it that you frequently dream of persons, things, or places, you never saw, thought of, or heard about?" 204 pages. Cloth..... 50

The Eleusinian and Bacchic Mysteries. A Dissertation by Thomas Taylor, Translator of "Plato," "Plotinus," "Porphyry," "Iamblichus." "Proclus," "Aristotle," etc. Third edition. Edited, with Introduction, Notes, Emendations, and Glossary, by Alexander Wilder, M. D. Cloth 8vo..... 3.00

History of Magic, by J. Ennemoser, translated from the German by Wm. Howitt. To which is added an appendix of the most remarkable and most authentic stories of Apparitions, Dreams, Second Sight, Somnambulism, Predictions, Vampires, Witchcraft, etc., 2 vols. post 8vo. Cloth..... 3.00

Phallicism; Celestial and Terrestrial, Heathen and Christian, its connection with the Rosicrucians and the Gnostics, and its foundation in Buddhism, with an Essay on Mystic Anatomy. By HARGRAVE JENNINGS, Author of the "Rosicrucians." With Supplement of Illustrations. Very scarce. Cloth..... \$15

White and Black Magic, or Practical Hints and Instructions for Students of Occultism, by F. Hartmann, M. D., Fellow of the Theosophical Society, a new edition, with corrections and additions. Cloth..... 2.00

The Mysteries of Magic; A digest of the Writings of Eliphas Levi. With a Biographical and Critical Essay by Arthur Edward Waite. Eliphas Levi, who died in 1865, and whose real name was Alphonse Louis Constant, ranks, beyond controversy, as the prince of the French adepts. His writings contain a revelation of the Grand Secret and a lucid interpretation of the theory of the Astral Light which is the Great Magical Agent. His philosophy of miracles is of lasting value and interest, and absolutely indispensable to all students of Occultism. It establishes a harmony between religion and science based on a rational explanation of all prodigies. Eliphas Levi revealed for the first time to the modern world the arcanum of will-power in the operations of transcendental magic, and he was also the originator of a new departure in Kabbalistic Exegesis. In the present digest, the information on the various branches of Esoteric Science, which is scattered over six large volumes of the French originals, has been diligently collated, and the translation carefully made. Cloth..... **4.00**

PROSPECTUS.

THE SECRET SYMBOLS OF THE ROSICRUCIANS, ETC.

CONSIDERABLE attention has been paid of late to the study of the Eastern Religions, but comparatively few people have attempted to penetrate behind the veil which hides the sanctuary of the Christian religion. Such attempts were, however, made during the Middle Ages by the *Hermetic Philosophers*, called the *Brotherhood of the Golden and Rosy Cross*, and they laid down the results of their investigations in certain Symbols, which were called "secret," because they can be understood only by those who possess the key to their understanding. This Key, which alone opens the door, is *Spirituality*, that is to say, *Reason*, unadulterated by sophistry, free from dogmatic and sectarian prejudices, free from scepticism and superstition.

Among the great majority of the followers of the Christian church this key has been lost, and sophistry has taken the place of understanding. There is, perhaps, not one in a thousand of laymen or priests who knows the true meaning of the symbols and ceremonies of the Christian church. What the modern Christian usually knows about Christianity is merely its *historical*, but not its *spiritual*, character. The *Bible* has been degraded into a mere history of the Jews, the universal glorious *Christ-Spirit*, the Light of the World, the divine element in Man, which lives to-day as it ever lived since the beginning of the world, has in the

minds of his worshippers dwindled down to a mortal man, who lived among the Jews and was executed as a criminal.

Ever since the days of the great Reformation, when the *Bible* became the common property of the people who were unable to understand the secret meanings of its fables and allegories, which were known only to the initiated, the Cabalists, Alchemists, and *Rosicrucians*, the Christian religion has been studied more in its intellectual than in its spiritual aspect. Its external forms have passed through a severe scrutiny by those who could see in them nothing but the external forms, and their internal spirit was lost. The authorities of the church, being themselves unable or unwilling to explain their secret meaning, insisted that the fables and allegories of the Bible should be accepted in their literal sense, however absurd and unintelligible the latter may be. The intellect of the educated classes revolted at such an attempt to put their reason in bondage, and the consequence was that the spiritual power of the church has been lost in proportion as the latter lost sight of the eternal truth. From a religion of Divine Wisdom, teaching the true relation which Man bears to the Eternal Source from which he emanated, and to which it is his destiny to return, modern Christianity has become almost entirely a system of forms and ceremonies with little or no spirituality, a means to afford a comfortable living to the priesthood, a method of deceiving the ignorant and gullible with false hopes, and of restraining the wicked by fear, while the Christian places of worship have become more than ever deserted, except by such as use them as places for religious amusement or for the display of

fashion, and there are comparatively few who bring with them the living Christ, when they visit the church. Sentiment has taken the place of *spiritual power*, superstition and scepticism the place of the life-giving Faith, and even the meaning of the terms signifying divine virtues have become unknown among the learned. The attacks of the materialist, sceptic, and arguer about the forms of Christianity are allowed to go on without any defence being made, and if such a defence is ever attempted, matters are usually rendered still worse for the church, on account of the inefficacy and unreasonableness of the arguments used by its defenders.

Under such circumstances it must be thrice welcome to every lover of Truth, whether he be a Christian minister, a layman, or an "infidel," as it will be to every Occultist, Theosophist, and Mason, to see the truths of religion revealed by the "Secret Symbols of the Rosicrucians." For three centuries these symbols have been hidden away, nor would it have been of much use to have them published sooner, as they would not have been understood. Now, however, as the Light, which arose from the East, originating in the recent revival of the study of Eastern books, has begun to radiate over the West, we may study and understand these symbols in this light. We may thus perhaps redeem Christianity from her present state of degradation and decay, and restore to her the living *Spirit of Christ*.

To facilitate the study of these Symbols, a *Vocabulary* has been added, giving correct definitions and explanations of the occult terms occurring in the book.

THE SECRET SYMBOLS OF THE ROSICRUCIANS

OF THE SIXTEENTH AND SEVENTEENTH CENTURIES,

COPIED AND TRANSLATED FROM AN OLD GERMAN MS. BY
FRANZ HARTMANN, M.D., WILL BE PUBLISHED
NOVEMBER 1, 1887, BY THE

OCCULT PUBLISHING COMPANY.

The plates of the Secret Symbols, 26 in number, will be colored by hand, exactly duplicating the originals which Dr. Hartmann secured during his researches among ancient Mss. and occult works in Germany.

Dr. Hartmann, who has within the past few years contributed several volumes to the literature of Occultism, and has become widely known as a remarkably well-informed writer on those subjects, has prepared an interesting and exhaustive Introduction to the work; also a Vocabulary giving correct definitions and explanations of the occult terms occurring in the book.

The author says: "It is a book which ought to be in the hands of every Occultist, Free Mason, and Catholic Priest, who wants to know what he is talking about."

The volume will be finely gotten up, in large type, printed on heavy paper, and substantially bound.

A specimen page, showing one of the colored plates as it will appear in the volume when completed, will be sent free on application.

The price, after publication, will be **\$6.00** per copy.

To those who subscribe and remit us previous to Nov. 1, 1887, the price will be **\$5.00** per copy.

3 copies to one address for	\$13.
6 " " " " " "	\$25.
